Exploring the Black Box - Nathan Rosenberg 1994-03-10

The process of technological change takes a wide variety of forms. Propositions that may be accurate when referring to the pharmaceutical industry may be totally inappropriate when applied to the aircraft industry or to computers or forest products. The central theme of Nathan Rosenberg's new book is the idea that technological changes are often 'path dependent', in the sense that their form and direction tend to be influenced strongly by the particular sequence of earlier events out of which a new technology has emerged. The book advances the understanding of technological change by explicitly recognising its essential diversity and path-dependent nature. Individual chapters explore the particular features of new technologies in different historical and sectoral contexts. This book presents a unique account of how technological change is generated and the processes by which improved technologies are introduced.

Economic Development for Everyone - Mark M. Miller 2017-05-09

How do we create employment, grow businesses, and build greater economic resilience in our low-income communities? How do we create economic development for everyone, everywhere - including rural towns, inner-city neighborhoods, aging suburbs, and regions such as Appalachia, American Indian reservations, the Mexican border, and the Mississippi Delta - and not just in elite communities? *Economic Development for Everyone* collects, organizes, and reviews much of the current research available on creating economic development in low-income communities. Part I offers an overview of the harsh realities facing low-income communities in the US today; their many economic and social challenges; debates on whether to try reviving local economies vs. relocating residents; and current trends in economic development that emphasize high-tech industry and high levels of human capital. Part II organizes the sprawling literature of applied economic development research into a practical framework of five dynamic dimensions: empower your residents: begin with basic education; enhance your community: build on existing assets; encourage your entrepreneurs; diversify your economy; and sustain your development. This book, assembled and presented in a unified framework, will be invaluable for students and new researchers of economic development in low-income communities, and will offer new perspectives for established researchers, professional economic developers and planners, and public officials. Development practitioners and community leaders will also find new ideas and opportunities, along with a broad view on how the many complex parts of economic development interconnect.

Economics in the Long Run - Theodore Rosenof 2000-11-09

Though understandably preoccupied with the immediate problems of the Great Depression, the generation of economists that came to the forefront in the 1930s also looked ahead to the long-term consequences of the crisis and proposed various solutions to prevent its recurrence. Theodore Rosenof examines the long-run theories and legacies of four of the leading members of this generation: John Maynard Keynes of Great Britain, who influenced the New Deal from afar; Alvin Hansen and Gardiner Means, who fought over the direction of New Deal policy; and Joseph Schumpeter, an opponent of the New Deal. Rosenof explores the conflicts that arose among long-run theorists, arguing that such disputes served eventually to set the stage for the emergence and domination of a short-run Keynesian approach to economic policy that collapsed under the impact of 1970s stagflation. Tracing the subsequent revival of long-run theories, Rosenof demonstrates their relevance to an understanding of the economy's problems over the past quarter-century and to the current debate over public policy. Law and Economics in Europe and the U.S. - Alain Marciano 2016-11-30

This volume traces the evolution of the field of law and economics from its European roots to its neoclassical "Chicagoan" period to its current identity as a more fluid, transatlantic discipline. Paying special attention to the work of German economist Juergen Backhaus, who was instrumental in the reintroduction of the European perspective to the field, this book analyzes this gradual shift in the law and economics debate and provides a state-of-the-art of the literature currently being produced by the field's most active scholars. Beginning with a discussion of the history of the field and Backhaus' role in its development, the volume provides a survey of issues central to the current debate such as legal processes in both Europe and the U.S., constitutional political economy, regulatory law, and the ongoing evolution of the European Union. The importance of this volume is two-fold, as it firmly grounds the discipline in history while establishing a future research agenda. This book will be of use to researchers studying law and economics as well as those interested in institutional analysis.

Handbook of the Economics of Art and Culture - Victor A. Ginsburgh 2006-09-13

Over the last 30 or 40 years a substantial literature has grown up in which the tools of economic theory and analysis have been applied to problems in the arts and culture. Economists who have surveyed the field generally locate the origins of contemporary cultural economics as being in 1966, the year of publication of the first major work in modern times dedicated specifically to the economics of the arts. It was a book by Baumol and Bowen which showed that economic analysis could illuminate the supply of and demand for artistic services, the contribution of the arts sector to the economy, and the role of public policy. Following the appearance of the Baumol and Bowen work, interest in the economics of the arts grew steadily, embracing areas such as demand for the arts, the economic functions of artists, the role of the nonprofit sector, and other areas. Cultural economics also expanded to include the cultural or entertainment industries (the media, movies, the publishing industry, popular music), as well as heritage and museum management, property right questions (in particular copyright) and the role of new communication technologies such as the internet. The field is therefore located at the crossroads of several disciplines: economics and management, but also art history, art philosophy, sociology and law. The Handbook is placed firmly in economics, but it also builds bridges across these various disciplines and will thus be of interest to researchers in all these different fields, as well as to those who are engaged in cultural policy issues and the role of culture in the development of our societies. *Presents an overview of the history of art markets *Addresses the value of art and consumer behavior toward acquiring art *Examines the effect of art on economies of developed and developing countries around the world

The Race for Capital: And Other Out-Of-The Box Economic Arguments - Tope Fasua 2015-08-07

The Race for Capital (And Other Out-of-the-Box Economic Arguments) is my third book and an aggregation of some of my most important economic and financial thoughts in recent times, as distilled from my weekly column and elsewhere. The book's title derives from the biggest economic argument of the day—the problem of inequality—which has finally been noticed by important economists around the world but to which no solution has yet been found. In this book, that argument is further advanced, and an African perspective is added, because whenever important economic arguments such as this goes on, that most vulnerable continent does not feature in the analysis. But the perspective of this book is not all about complaining about the state of Africa and its position development-wise but also on solutions. Some germane solutions are hereby offered for African economies especially, but these are also for every other economy around the

world that seeks to reposition its people and make a dent in the hard-to-solve quagmires facing the world today. There are no simple solutions, apparently.
