**A Synoptic Harmony of Samuel, Kings, and Chronicles** - James Newsome 2006-10-19

Students of the Old Testament have long recognized that in the two histories of the Hebrew monarchies, Samuel/Kings and Chronicles, a literary relationship exists which is akin to that of the Synoptic Gospels of the New Testament. That is, more than one extended narrative have come down to us from antiquity, each of which exhibits distinctive characteristics, while at the same time demonstrating a more than casual relationship with the other(s). Unlike their colleagues in Synoptic Gospel studies, however, students of Samuel/Kings and Chronicles have not had easy access to English-language harmonies in which the principal texts are laid side-by-side in such a manner that comparison is facilitated not just of large blocks of text, but of individual words and phrases as well. . .

. The text is that of the Revised Standard Version, Samuel/Kings in the left column, Chronicles in the right (except where noted). At all times, however, the standard of reference has remained the Masoretic Text, and occasionally I have ventured to introduce minor adjustments to the RSV text in order more accurately to demonstrate the relationship between the received Hebrew text of our sources. --from the Foreword

The Essential Evangelical Parallel Bible enables readers to easily compare a quartet of modern translations that span the full range of approaches, from the most precise and literal to the most dynamic and

reader-friendly. The New King James Version and English Standard Version permit close word-study, while the New Living Translation and The Message present the text as its earliest audiences might have experienced it. The complete texts of the four translations featured in this volume are conveniently displayed on facing pages (two translations per page), with the same set of verses on each one. The EEPB is particularly noteworthy because it is the first parallel Bible to feature the updated NLT text.

Emerging Epistemologies - Ziauddin Sardar 2022-07-18

Our established, age-old notions of knowledge have ceased to be meaningful in postnormal times. What we define as true knowledge, and the ways in which we create it, have changed radically. The emergence of 'Big Data' and Artificial Intelligence, as well as 'fake news', 'alternative facts', 'deep fake', and 'post-truth' have changed the nature of knowledge production. Established disciplines, such as economics, sociology, anthropology, political science, have lost their significance. Revengeful capitalism, based on profit-driven algorithms, has not only led to environmental destruction, but has also ruined our understanding of what actually constitutes knowledge. In an era that defines societies by questions of knowledge, it becomes necessary and urgent to ask: how is knowledge produced, how is it distributed, and who decides what is true knowledge and what is not? *Emerging Epistemologies* explores the changing nature of knowledge production and investigates how emerging epistemologies are transforming our perceptions of the present and the future. The contributors to the volume examine digital landscapes, zombie disciplines, higher education, the role of metaphysics, and epistemological justice; and argue that epistemology does not exist in a vacuum but is determined and embedded in the worldview and culture of society. The chaos and contradiction that accompanies our increasingly complex world requires us to see through 'the smog of ignorance', and seek new ways of thinking and creating knowledge that promotes sustainability, diversity, social justice and appreciates different ways of knowing, being, and doing.

The US Strategic Petroleum Reserve has been destroyed by a white supremacist group. The attack has been hushed-up and time is of the essence if national and global economic meltdown is to be avoided. As McIntyre tries to apply his unique ability to salvage the situation, it is hard to know who is working harder to thwart him: his allies or his enemies. It might be safer to stay ahead of both. McIntyre will never forgive Tampoline for what he has done. He is not even sure he can suppress his animosity in pursuit of the greater good

*Enlightenment and Ecology* - Tarinski Yavor Tarinski 2021-02-20

Throughout his life, prophetic American philosopher Murray Bookchin created social ecology as a comprehensive social program for the challenges of our present era. Through tireless teaching, speaking, organizing, and writing, Bookchin presented a humanist vision of ecology based on community, direct democracy, and the better promises of the Enlightenment, showing how we could transform our society into one that is free and egalitarian. *Enlightenment and Ecology* is an international collection of commemorative essays by scholars and activists who have each incorporated the ideas of social ecology into their own work. This book also examines how the Kurdish freedom movement is using the Bookchin's utopian ideas. In a time of urgent need for radical change, these essays provide both precious historical lessons and a transformative road map.

**Hidden Hunger and the Transformation of Food Systems** - H.K. Biesalski 2020-10-06

Hidden hunger is not about providing enough calories, it is about a lack of micronutrients, which has life-long consequences for the children who are mostly affected. This begins with physical and cognitive developmental disorders and continues with an increased risk of non-communicable diseases and the occurrence of obesity. The book compiles the contributions of the Fourth Congress on Hidden Hunger 2019 as original articles. The focus of the congress was the problem of malnutrition and overweight, which can coexist and is termed a “double burden”. Part of the book deals with the causes of malnutrition and the challenge of achieving an agricultural system that is more focused on food quality. Another part discusses the causes and intervention approaches to tackling childhood obesity, especially in connection with malnutrition. All in all, this publication is a summary of important work by highly renowned authors on the topic of the congress: “Hidden Hunger and the Transformation of Food Systems: How to Combat the Double Burden of Malnutrition?” Like its two predecessors, the book fills an important gap by summarizing the essential aspects for science, applied research, and politics at a high level.

**Past Due** - Angela Zera Allen 2021-10-22

After centuries of theft, murder, oppression, discrimination, exclusion, and broken promises experienced by Black Americans and American Indians, at the hands of the U.S. government, U.S. courts, and many racist White people, reparations are due. They are past due. But why? Who is responsible for this reckoning? What would it look like? These are some of the questions you may be asking yourself. In Past Due, authors Angie Allen and Courtney Carmichael try to answer these questions as reporters might. Drawing on history, current factual realities, their own personal stories, and insights from a wide range of activists, writers, scholars, and other experts, they share their findings and experience, to help create better understanding. Past Due is full of easy-to-use links to learning more, and a roadmap to making reparations. Sweeping government policy and corporate policy change is essential for making reparations. But Angie and Courtney hope that Past Due will inspire more White Americans to examine their individual roles, past and future.

**I & II Kings** - A. Graeme Auld 1986-01-01

Carrying forward brilliantly the pattern established by Barclay's New Testament series, the Daily Study Bible has been extended to cover the entire Old Testament as well. Invaluable for individual devotional

study, for group discussion, and for classroom use, the Daily Study Bible provides a useful, reliable, and eminently readable way to discover what the Scriptures were saying then and what God is saying today.

Anarchism and Ecological Economics - Ove Daniel Jakobsen 2018-12-17  
Anarchism and Ecological Economics: A Transformative Approach to a Sustainable Future explores the idea that anarchism – aimed at creating a society where there is as much freedom in solidarity as possible – may provide an ideal political basis for the goals of ecological economics. It seems clear that it is going to be impossible to solve the problems connected to environmental degradation, climate change, economic crashes and increasing inequality, within the existing paradigm. The anarchist aims of reducing the disparities of rank and income in society and obtaining a high standard of living within environmentally sound ecosystems chime well with the ecological economists' goal of living within our environmental limits for the betterment of the planet and society. The book refers to the UN's sustainability development goals, and the goals expressed in the Earth Charter, viewing them through an anarchist's lens. It argues that in order to establish ecological economics as a radical new economy right for the 21st century, neoliberal economics needs to be replaced. By connecting ecological economics to a solid philosophical tradition such as anarchism, it will be easier for ecological economics to become a far more potent alternative to "green" economic thinking, which is based on, and supports, the dominant political regime. Innovative and challenging, this book will appeal to

students and scholars interested in economics and the politics surrounding it.

**Six Steps Back to the Land** - Colin Tudge 2016-01-28

Colin Tudge coined the expression "Enlightened Agriculture" to describe agriculture that is "expressly designed to provide everyone, everywhere, with food of the highest standard, nutritionally and gastronomically, without wrecking the rest of the world". In *Six Steps Back to the Land*, he explains how we can achieve that, and have truly sustainable, resilient and productive farms, looking at: why we need to rethink our approach to farming; how we can move to low-input mixed farms; how tightly-integrated farms employ many skilled people dealing with the practicalities of this form of farming in today's world; and how we can get involved. *Six Steps* will inspire anyone to take an interest in our food chain and make a difference.

*Developing Mathematical Thinking* - Jonathan D. Katz 2014-07-07

In this country we have done a poor job of helping students come to see the wonder, beauty and power of mathematics. Standards can be brought into the picture, but unless we think about what it means to truly engage students in mathematics we will continue to be unsuccessful. The goal of this book is to begin to change the way students experience mathematics in the middle and high school classrooms. In this book you will find a theoretical basis for this approach to teaching mathematics, multiple guides and questions for teachers to think about in relation to their everyday teaching, and over 30 examples of problems, lessons, tasks, and projects that have been used effectively with urban students.

*Rethinking Food and Agriculture* - Ammir Kassam 2020-10-18

Given the central role of the food and agriculture system in driving so many of the connected ecological, social and economic threats and challenges we currently face, *Rethinking Food and Agriculture* reviews, reassesses and reimagines the current food and agriculture system and the narrow paradigm in which it operates. *Rethinking Food and Agriculture* explores and uncovers some of the key historical, ethical, economic, social, cultural, political, and structural drivers and root causes of unsustainability, degradation of the agricultural environment,

destruction of nature, short-comings in science and knowledge systems, inequality, hunger and food insecurity, and disharmony. It reviews efforts towards 'sustainable development', and reassesses whether these efforts have been implemented with adequate responsibility, acceptable societal and environmental costs and optimal engagement to secure sustainability, equity and justice. The book highlights the many ways that farmers and their communities, civil society groups, social movements, development experts, scientists and others have been raising awareness of these issues, implementing solutions and forging 'new ways forward', for example towards paradigms of agriculture, natural resource management and human nutrition which are more sustainable and just. *Rethinking Food and Agriculture* proposes ways to move beyond the current limited view of agro-ecological sustainability towards overall sustainability of the food and agriculture system based on the principle of 'inclusive responsibility'. Inclusive responsibility encourages ecosystem sustainability based on agro-ecological and planetary limits to sustainable resource use for production and livelihoods. Inclusive responsibility also places importance on quality of life, pluralism, equity and justice for all and emphasises the health, well-being, sovereignty, dignity and rights of producers, consumers and other stakeholders, as well as of nonhuman animals and the natural world. Explores some of the key drivers and root causes of unsustainability, degradation of the agricultural environment and destruction of nature. Highlights the many ways that different stakeholders have been forging 'new ways forward' towards alternative paradigms of agriculture, human nutrition and political economy, which are more sustainable and just. Proposes ways to move beyond the current unsustainable exploitation of natural resources towards agroecological sustainability and overall sustainability of the food and agriculture system based on 'inclusive responsibility'.

North American Agroforestry - Harold E. Gene Garrett 2022-02-23

North American Agroforestry Explore the many benefits of alternative land-use systems with this incisive resource Humanity has become a victim of its own success. While we've managed to meet the needs—to one extent or another—of a large portion of the human population, we've often done so by ignoring the health of the natural environment we rely on to sustain our planet. And by deteriorating the quality of our air, water, and land, we've put into motion consequences we'll be dealing with for generations. In the newly revised Third Edition of North American Agroforestry, an expert team of researchers delivers an authoritative and insightful exploration of an alternative land-use system that exploits the positive interactions between trees and crops when they are grown together and bridges the gap between production agriculture and natural resource management. This latest edition includes new material on urban food forests, as well as the air and soil quality benefits of agroforestry, agroforestry's relevance in the Mexican context, and agroforestry training and education. The book also offers: A thorough introduction to the development of agroforestry as an integrated land use management strategy Comprehensive explorations of agroforestry nomenclature, concepts, and practices, as well as an agroecological foundation for temperate agroforestry Practical discussions of tree-crop interactions in temperate agroforestry, including in systems such as windbreak practices, silvopasture practices, and alley cropping practices In-depth examinations of vegetative environmental buffers for air and

water quality benefits, agroforestry for wildlife habitat, agroforestry at the landscape level, and the impact of agroforestry on soil health Perfect for environmental scientists, natural resource professionals and ecologists, North American Agroforestry will also earn a place in the libraries of students and scholars of agricultural sciences interested in the potential benefits of agroforestry.

**Animal Welfare Science, Husbandry and Ethics** - Mark Fisher 2019-02-15

Animal Welfare Science, Husbandry and Ethics charts the history of our understanding of farm animal welfare, throughout time—the human use of animals in different eras, and farming in different systems. The book also looks at our current animal welfare systems, the pathway to how we got here, and future considerations for achieving a sustainable animal welfare model. *Water Systems Analysis, Design, and Planning* - Mohammad Karamouz  
2021-12-29

This book presents three distinct pillars for analysis, design, and planning: urban water cycle and variability as the state of water being; landscape architecture as the medium for built-by-design; and total systems as the planning approach. The increasing demand for water and urban and industrial expansions have caused myriad environmental, social, economic, and political predicaments. More frequent and severe floods and droughts have changed the resiliency and ability of water infrastructure systems to operate and provide services to the public. These concerns and issues have also changed the way we plan and manage our water resources. Focusing on urban challenges and contexts, the book provides foundational information regarding water science and engineering while also examining topics relating to urban stormwater, water supply, and wastewater infrastructures. It also addresses critical emerging issues such as simulation and economic modeling, flood resiliency, environmental visualization, satellite data applications, and digital data model (DEM) advancements. Features: Explores various theoretical, practical, and real-world applications of system analysis, design, and planning of urban water infrastructures

Discusses hydrology, hydraulics, and basic laws of water flow movement through natural and constructed environments Describes a wide range of novel topics ranging from water assets, water economics, systems analysis, risk, reliability, and disaster management Examines the details of hydrologic and hydrodynamic modeling and simulation of conceptual and data-driven models Delineates flood resiliency, environmental visualization, pattern recognition, and machine learning attributes Explores a compilation of tools and emerging techniques that elevate the reader to a higher plateau in water and environmental systems management *Water Systems Analysis, Design, and Planning: Urban Infrastructure* serves as a useful resource for advanced undergraduate and graduate students taking courses in the areas of water resources and systems analysis, as well as practicing engineers and landscape professionals.

**The World Made Otherwise** - Timothy J. Gorringer 2018-11-13

Many natural scientists believe climate change will bring civilizational collapse. Tim Gorringer argues that behind this threat is a commitment to false values, embodied in our political, economic, and farming systems. At the same time, millions of people the world over--perhaps the majority--are committed to alternative values and practices. This book explores how these values, already foreshadowed in people's movements all over the world, can produce different political and economic realities which can underwrite a safe and prosperous future for all.

*Urban Water Engineering and Management* - Mohammad Karamouz  
2010-01-20

In past decades, urban water management practices focused on optimizing the design and operation of water distribution networks, wastewater collection systems, and water and wastewater treatment plants. However, municipalities are now faced with aging urban water infrastructures whose operation must be improved and expanded to maintain current high

**At The Field's Edge** - Richard Hawking 2019-04-22

Adrian Bell was farming and writing during a period when the English countryside underwent its most significant transformation for hundreds

of years. His work, spanning sixty years from 1920 to 1980, not only documents this agricultural revolution, but also warns of the effects it will have both for the environment and for society. As these consequences dominate the English countryside today, Bell's views have relevance and importance to its future management. At the Field's Edge appraises Bell's prescient but still timely observations about the ecology, economy and culture of the British countryside, and introduces his beautifully crafted prose to a new generation of readers. Though he has been largely neglected until now, Bell's voice is one we should listen to, not least because he is one of our greatest writers about farming and rural life. If we pause at the field's edge with him for a moment, we get a lesson not only in aesthetic appreciation, but also a message about what is disappearing from the countryside. A thoughtful and engaging exploration of Adrian Bell's writing and his 'practical' relevance to contemporary debates about the English countryside. The period from 1920 to 1980 saw the most significant transformation of the countryside for hundreds of years. Will be of great interest to British and rural historians and anyone interested in rural affairs. Examines factors that continue to impact and jeopardize the countryside; the rise of industrial farming and its environmental impact and the growing separation of the country and the city. Illustrated with black & white photographs and artworks. Richard Hawking's interest in the writing of Adrian Bell stems from growing up on a small 70-acre farm - he is also the creator of The Adrian Bell Society website.

**The Threefold Struggle** - Andrew Frederick Smith 2022-08-01

We members of settler colonial culture—the latest form of what novelist and cultural critic Daniel Quinn calls Taker culture—are constrained by myriad institutions that leave us with little choice but to engage in practices that are profoundly damaging to the planet, to others, and to ourselves. Our path to living otherwise, Andrew Frederick Smith argues, lies in the threefold struggle, which is inspired by Quinn's focus on the interweaving roots of ecological, social, and personal wellbeing. These three forms of wellbeing are co-implicated. We cannot enjoy one without equally enjoying the others; they are a package deal. As such, what

works for people individually and collectively works for the planet, and vice versa. Reclaiming our lives and revitalizing our human and more-than-human communities are salient acts of resistance against Taker culture. They offer means of escape from our cultural captivity and an opportunity for full-spectrum wellbeing.

**The Meat Crisis** - Joyce D'Silva 2017-08-23

Meat and dairy production and consumption are in crisis. Globally, 70 billion farm animals are used for food production every year. It is well accepted that livestock production is a major contributor to greenhouse gas emissions. The Food and Agriculture Organization of the United Nations (FAO) predicts a rough doubling of meat and milk consumption in the first half of the 21st century, with particularly rapid growth occurring in the developing economies of Asia. What will this mean for the health and wellbeing of those animals, of the people who consume ever larger quantities of animal products, and for the health of the planet itself? The new edition of this powerful and challenging book explores

the impacts of the global growth in the production and consumption of meat and dairy, including cultural and health factors, and the implications of the likely intensification of farming for both small-scale producers and for animals. Several chapters explore the related environmental issues, from resource use of water, cereals and soya, to the impact of livestock production on global warming and issues concerning biodiversity, land use and the impacts of different farming systems on the environment. A final group of chapters addresses ethical and policy implications for the future of food and livestock production and consumption. Since the first edition, published in 2010, all chapters have been updated, three original chapters re-written and six new chapters added, with additional coverage of dietary effects of milk and meat, antibiotics in animal production, and the economic, political and ethical dimensions of meat consumption. The overall message is clearly that we must eat less meat to help secure a more sustainable and equitable world.
