The Role of Procurement Professionals in Industrial Projects - Mario Büsch 2014-04-23

This doctoral-thesis deals with the role of procurement professionals in industrial projects. The role of procurement in industrial manufacturing has attracted considerable attention over the last several years; however, the role of procurement in projects is rather underresearched. From a project management point of view, procurement is mainly considered a transactional task, and remarkably few project management standards consider procurement at all. To overcome this gap, a Procurement Project Involvement Matrix has been developed. Building on this matrix, a Project Procurement Organisation Model for procurement experts involved into industrial projects was developed, too. In general, the project procurement job tasks framework as well as the Project Procurement Organisation Model will help to implement, improve and audit the involvement level of procurement in projects.

Handbook for Process Plant Project Engineers - Peter Watermeyer 2002-09-27

This excellent book systematically identifies the issues surrounding the effective linking of project management techniques and engineering applications. It is not a technical manual, nor is it procedure-led. Instead, it encourages creative learning of project engineering methodology that can be applied and modified in different situations. In short, it offers a distillation of practical 'on-the job' experience to help project engineers perform more effectively. While this book specifically addresses process plants, the principles are applicable to other types of engineering project where multidisciplinary engineering skills are required, such as power plant and general factory construction. It focuses on the technical aspects, which typically influence the configuration of the plant as a whole, on the interface between the various disciplines involved, and the way in which work is done - the issues central to the co-ordination of the overall engineering effort. It develops an awareness of relationships with other parties - clients, suppliers, package contractors, and construction managers - and of how the structure and management of these relationships impact directly on the performance of the project engineer. Readers will welcome the author's straightforward approach in tackling sensitive issues head on. COMPLETE CONTENTS Introduction A

Enhancing Procurement Practices - Attila Kovács 2011-06-27

Enhancing Procurement Practices is organised around four main points: -overview and analysis of procurement principles, -practical approach to drafting of solicitation and contract documents, -conduct of procurement procedures, -overview of the e-procurement arena. Although the addressed procurement methods can be used on a wide scale, this book concentrates primarily on such cases when the subject of procurement is complex, or the solicited goods and services are relatively simple but the intended long-term relationship calls for a fairly conscious source selection. Project procurement, the most complicated form of buying civil engineering work, goods, and services, is thoroughly addressed. Beyond the structured overview and comparative analysis of terminology and principles, the book describes such new concepts as single-source preference for simultaneous procurements, dual-term frame contract for parallel suppliers, and the use of semi-consolidated contract documents. Effective utilisation of theories boils down - among others - to a consistent set of procurement-related terms, proven methodology for drafting comprehensive solicitation documents and contracts, and practical details of communication with offerors.

Procurement of Works - 2000

These Standard Prequalification Documents serve as a guide for those wanting to prequalify to bid on large contracts for projects financed by the World Bank. Qualifying as a bidder is separate from the bid evaluation process. Before invitations to bid on large or especially complex works projects are issued, a process of prequalification is required to select competent bidders. This document helps bidders through the prequalification process. To simplify presentation by applicants for prequalification, standard forms have been prepared for the submission of relevant information. Guidance notes and examples are provided for the implementing agency making the evaluation. Annexes give information about prequalification that are likely to be of interest to potential bidders on World Bank projects. NOTE: This replaces Standard Prequalification Document: Procurement of Works (September 1999), Stock no. 14601 (ISBN 0-8213-4601-6).
