## The Scientific Letters and Papers of James Clerk Maxwell: Volume 2, 1862-1873 - James Clerk Maxwell 1990

This second volume of James Clerk Maxwell's correspondence and manuscript papers begins in mid-1862 with his first reference reports for the Royal Society, and concludes in December 1873 shortly before the formal inauguration of the Cavendish Laboratory. The documents describe his involvement with the wider scientific community in Victorian Britain, and the period of his scientific maturity. In the years 1862-73 Maxwell wrote the classic works on statistical molecular theory and field physics, including the Treatise on Electricity and Magnetism, which established his unique status in the history of science. His letters and drafts of this period provide unique insight into this work, which remains fundamental to modern physics. Few of the manuscripts reproduced here have received prior publication in other than truncated form, and the volume includes Maxwell's correspondence with G.G. Stokes, Lord Kelvin and P.G. Tait. The edition is annotated with a full historical commentary and will be fascinating reading for anyone interested in the history of science or physics.

Mathematical Papers - William Kingdon Clifford 2007

William Clifford (1845-1879) was an important mathematician of his day. He is most remembered today for his invention of Clifford algebras, which are fundamental in modern differential geometry and mathematical physics. His ideas on the connection between energy and matter and the curvature of space were important in the eventual formulation of general relativity. Clifford was particularly interested in non-Euclidean geometry. However, in his relatively brief career, he made contributions to diverse fields of mathematics: elliptic functions, Riemann surfaces, biquaternions, motion in Euclidean and non-Euclidean space, spaces of constant curvature, syzygies, and so on. He was also well-known as a teacher and for his ideas on the philosophy of science. This work covers the life and mathematical work of Clifford, from his early education at Templeton (Exeter) to King's College (London), to Trinity (Cambridge) and ultimately to his professorship at University

College (London)--a post which he occupied until the time of his death. Tucker discusses Clifford's Fellowship at the Royal Society and his Council post at the London Mathematical Society. His papers and talks are presented and peppered with entertaining anecdotes relating Clifford's associations with his private tutor, family members, and his wide circle of personal friends and professional colleagues.
