Diary, 1937-1943 - conte Galeazzo Ciano 2002

The Ciano Diaries are one of the most important documents recording the events taking place in Europe leading up to the Second World War and how they effected the rest of the world. Galezzo Ciano was in the forefront of those momentous events, not only because he happened to be Mussolini's son in law, but most important because at the age of 35 he was also Italy's Minister of Foreign Affairs and one of the major proponents of the Axis Alliance with Nazi Germany.

Unpaid Work and the Economy - Antonella Picchio 2005-08-02

In economics, the voluntary sector is surprisingly understudied. In order to fully understand economics, unpaid and voluntary work needs to be taken into account and afforded the same status as paid activities. This book constitutes a rigorous economic analysis with special emphasis on gender issues and covers every conceivable angle of unpaid work and all its ramifications for the modern economy. The unified vision offered by this group of leading contributors ensures this book is a work of

excellent quality. There is every chance it will become a seminal study on unpaid work and as such will provide a useful reference for students and academics involved in gender studies, econometrics, and consumption studies.

The Economics of Small Island Tourism - Riaz Shareef 2008-01-01

This study forms an entirely new area of research on Small Island Tourism Economies (SITEs). It addresses the importance of uncertainty in monthly international tourist arrivals and country risk indicators to the macroeconomy. Conditional volatilities are estimated for international tourist arrivals, and an economic interpretation from the estimated results is provided. In achieving these two objectives, this work presents an extensive assessment of the important characteristics and the impact of tourism in SITEs in relation to their gross domestic product, balance of payments, employment and foreign direct investment, among other factors. This book is unique in giving emphasis to macroeconomic implications rather than an industry focus. The Economics of Small Island Tourism will appeal to academics at the undergraduate and postgraduate levels involved in environmental and tourism management as well as tourism economics.

The Euro - Marco Buti 2010-04-01

On 1 January 1999 eleven EU Member States adopted a new currency - the euro. The introduction of the euro was a remarkable feat in the history of European monetary, financial, economic and political integration. It was an event of worldwide significance. Despite much criticism and predictions that it would quickly collapse, the first decade of the euro has been a remarkable success. The euro area has now expanded to 16 members with a combined population of 326 million and contributes 16 per cent of global output. This 2010 book was the first to provide a wide-ranging strategic review of the first decade of the euro. Written by an impressive line-up of academic and professional economists, The Euro: The First Decade is an invaluable reference for scholars and policy makers who wish to know more about the successes and failures of the euro and the challenges that lie ahead.

Complexity in Society: From Indicators Construction to their Synthesis - Filomena Maggino 2017-07-27

This volume discusses the many recent significant developments, and identifies important problems, in the field of social indicators. In the last ten years the methodology of multivariate analysis and synthetic indicators construction significantly developed. In particular, starting from the classical theory of composite indicators many interesting approaches have been developed to overcome the weaknesses of composites. This volume focuses on these recent developments in synthesizing indicators, and more generally, in quantifying complex phenomena.

Impact Evaluation in Practice, Second Edition - Paul J. Gertler 2016-09-12

The Economic Impact of Digital Technologies - Paolo Guerrieri

2011-01-01

The Economic Impact of Digital Technologies offers a profoundly illuminating examination of ICT transformations in Europe and its critical role in greater social inequality. It presents scholars and policy makers with original and practical tools to benchmark and assess the ICT diffusion and inclusion process. The core message of book is that a coherent European strategy for embedding ICT technologies in society is long overdue. Social differences in ICT use persist and are in some cases widening, yet despite this fact there is a dearth of research on remedying digital inequalities. This is of particular importance given that relative levels of ICT use, investment and research can often explain variations in economic performance between industrialised countries. The purpose of this book is to fill the gap in the literature by presenting key evidence on the economic benefits (and costs) deriving from investment in an inclusive information society. The authors propose indicators and indexes of digital development and e-Inclusion (and its flip-side e-exclusion) to assess the relationship between inclusive ICT and wider economic and social performance in Europe. Presenting the methodology to monitor countries' performance and ICT use, together with original measures and policy suggestions, this book will be indispensable to policymakers, scholars and postgraduate students in a variety of areas including economic growth, innovation, industrial and organizational studies, information and technology, European studies, and public and social policy.

The Interrelationship Between Financial and Energy Markets - Sofia Ramos 2014-08-09

In the last decade, energy markets have developed substantially due to the growing activity of financial investors. One consequence of this massive presence of investors is a stronger link between the hitherto segmented energy and financial markets. This book addresses some of the recent developments in the interrelationship between financial and energy markets. It aims to further the understanding of the rich interplay between financial and energy markets by presenting several empirical studies that illustrate and discuss some of the main issues on this

agenda.

Metodi e strumenti di analisi per la valutazione economica del patrimonio culturale - Massimiliano Mazzanti 2003

Bibliografia nazionale italiana - 2005

Applied Econometrics - Massimiliano Marcellino 2018-07

The goal of the book is to facilitate both teaching of applied econometrics, particularly in undergraduate and Master courses, and learning by students or those concerned with a formal measurement of economic events. Statistics is needed for a correct formulation of the problem and interpretation of the results, but an excess of formalization may discourage students. For this reason, the statistical content of this book is rigorous but limited to what is strictly necessary for a proper application of the methods. All theoretical concepts are then illustrated empirically, with examples that use either simulated data, in order to have a more immediate and controlled feedback, or actual data on economic variables. The software used is EViews, usually available in academic computer rooms or otherwise at an affordable price. Each chapter begins with the necessary theoretical background, continues with the practical applications based on simulated and real data using EViews, and concludes with a summary of the main concepts developed in the chapter and with both theoretical and applied exercises as a way to test and improve learning.

Statistical Analysis of Financial Data in R - René Carmona 2013-12-13

Although there are many books on mathematical finance, few deal with the statistical aspects of modern data analysis as applied to financial problems. This textbook fills this gap by addressing some of the most challenging issues facing financial engineers. It shows how sophisticated mathematics and modern statistical techniques can be used in the solutions of concrete financial problems. Concerns of risk management are addressed by the study of extreme values, the fitting of distributions with heavy tails, the computation of values at risk (VaR), and other measures of risk. Principal component analysis (PCA), smoothing, and

regression techniques are applied to the construction of yield and forward curves. Time series analysis is applied to the study of temperature options and nonparametric estimation. Nonlinear filtering is applied to Monte Carlo simulations, option pricing and earnings prediction. This textbook is intended for undergraduate students majoring in financial engineering, or graduate students in a Master in finance or MBA program. It is sprinkled with practical examples using market data, and each chapter ends with exercises. Practical examples are solved in the R computing environment. They illustrate problems occurring in the commodity, energy and weather markets, as well as the fixed income, equity and credit markets. The examples, experiments and problem sets are based on the library Rsfad developed for the purpose of the text. The book should help quantitative analysts learn and implement advanced statistical concepts. Also, it will be valuable for researchers wishing to gain experience with financial data, implement and test mathematical theories, and address practical issues that are often ignored or underestimated in academic curricula. This is the new, fully-revised edition to the book *Statistical Analysis of Financial Data in S-Plus*. René Carmona is the Paul M. Wythes '55 Professor of Engineering and Finance at Princeton University in the department of Operations Research and Financial Engineering, and Director of Graduate Studies of the Bendheim Center for Finance. His publications include over one hundred articles and eight books in probability and statistics. He was elected Fellow of the Institute of Mathematical Statistics in 1984, and of the Society for Industrial and Applied Mathematics in 2010. He is on the editorial board of several peer-reviewed journals and book series. Professor Carmona has developed computer programs for teaching statistics and research in signal analysis and financial engineering. He has worked for many years on energy, the commodity markets and more recently in environmental economics, and he is recognized as a leading researcher and expert in these areas.

Soviet Politics In The 1980s - Helmut Sonnenfeldt 2019-07-11

The Soviet Union, in the aftermath of the Brezhnev era, may well stand at a crossroads in its history. According to the authors of this volume, the Chernenko administration and the new generation of political leaders now on the threshold of power must steer through a difficult period in the USSR's international relations, especially where the U.S. is concerned, continuing to assert what they regard as the legitimate Soviet role as a world superpower while coping with an inflexible and aging political system, a stagnant economy, and growing social problems. The contributors provide a careful consideration of the choices confronting the USSR as this new era begins and analyze the paths its leaders may take as they grapple with the challenges of the 1980s.

The Role of Motivation in Second Language Acquisition - Steve Buckledee 2011-09-01

This book presents a succinct summary of various theories of motivation and an overview of some sixty years of empirical research into the role of motivation in second language acquisition, from the social psychological approach of the pioneering work of the Canadian school (Robert Gardner, Richard Clement, Peter MacIntyre and others) to the more recent investigations conducted by such scholars as Zoltán Dörnyei, Kata Csizér and Ema Ushioda. The insights generated by such research are then applied to the author's own investigation of the language learning motivation of undergraduates studying at the University of Cagliari on the Italian island of Sardinia. Steve Buckledee teaches English language and linguistics at the University of Cagliari, having previously worked in various state and private institutions in London, Canterbury, Oporto, Madrid, Milan and Rome. His main research interests are Second Language Acquisition and English as a Lingua Franca.

[World Development Report 2019](#) - World Bank 2018-10-31

Work is constantly reshaped by technological progress. New ways of production are adopted, markets expand, and societies evolve. But some changes provoke more attention than others, in part due to the vast uncertainty involved in making predictions about the future. The 2019 World Development Report will study how the nature of work is changing as a result of advances in technology today. Technological progress disrupts existing systems. A new social contract is needed to smooth the transition and guard against rising inequality. Significant investments in human capital throughout a person's lifecycle are vital to this effort. If workers are to stay competitive against machines they need to train or retool existing skills. A social protection system that includes a minimum basic level of protection for workers and citizens can complement new forms of employment. Improved private sector policies to encourage startup activity and competition can help countries compete in the digital age. Governments also need to ensure that firms pay their fair share of taxes, in part to fund this new social contract. The 2019 World Development Report presents an analysis of these issues based upon the available evidence.
