OSCE Cases with Mark Schemes - Susan Shelmerdine 2012

Medical students often feel they understand the theory behind the clinical aspect of medicine but seldom have enough chance to put what they learn into practice. In addition, clinical examinations pose a challenge to students who may be technically and theoretically excellent, but who have poor examination technique. It is quite common for students to lack understanding of how they will be marked, how

much emphasis to place upon certain actions or how much detail is expected of them. 'OSCE CASES WITH MARK SCHEMES' is intended to fill this gap. It provides OSCE mark schemes to reflect the real OSCE experience, by encouraging self assessment when practicing the clinical scenarios. The book includes chapters on communication skills, medical ethics, explanation stations, paediatrics and obstetrics and gynaecology subjects which are sometimes neglected elsewhere. All four authors have taken part in medical student teaching and OSCE examinations. They understand what will earn marks in the actual exam. All the OSCE scenarios are from stations previously examined in the UK's top medical schools. This book prepares the student for what the actual finals exam will be like. CONTENTS: SECTION ONE, COMMUNICATION STATIONS - Presenting Complaints - Psychiatry History Taking - Pediatrics History Taking - Obstetrics History Taking - Gynaecology History Taking - Medical

Ethics - Difficult Communication Scenarios - Pharmacology - Consenting - Explanation of Management and Results SECTION TWO, PERFORMANCE STATIONS - Examination Skills - Practical Skills - Data Interpretation - Closing Remarks

Two Weeks To Paces: Practical Assessment Of Clinical Examination Skills - Hasan

Haboubi 2021-05-05

The MRCP examination is constantly changing, reflecting the changing pressures on doctors in training. Whilst the MRCP PACES examination has evolved with the times, the core ethos of it, to act as a benchmark for sound clinical examination, logical diagnostic ability, common sense and most importantly, the development of compassionate and ethical physicians has remained unchanged. Whilst this exam has often struck fear into the hearts of junior doctors, we believe it is an assessment of progression during a physician's training that should be relished as an opportunity to demonstrate these ageless qualities that caring practitioners should possess. This book was born out of the

philosophy that all doctors sitting their MRCP PACES already have the knowledge and skill to pass the exam, but just require guidance in the correct logical approach that the Royal College is looking for. The book has, therefore, quite unlike other MRCP PACES books, avoided any attempts at being a definitive text. Rather, it has focused on the key aspects that the authors believe are required to pass the examination, in particular focus on presentation style. Whilst medicine is indeed an ocean, the most commonly examined topics have been selected to reflect the likely scenarios a candidate will face — as the old adage goes — 'common things occur commonly'. In producing this book, extensive feedback was sought from candidates revising for the examination to reflect their needs. The layout therefore involves a methodical approach with a short introduction, similar to that presented in the exam, followed by clinical findings expected to be found. An example of presentation style has then been produced to

allow the candidate to rehearse and practice this essential component of the exam. Doctors preparing for the exam have limited time due to busy work schedules. Therefore, summary books are key for candidates sitting the MRCP PACES examination. Most PACES candidates fail the exam based on history and communication stations. Therefore, attention has been paid to: *Diagnostic Neuroradiology* - Valery N. Kornienko 2008-11-16

In this monograph, the authors summarize their findings in complex neuroimaging work (cranio-, spondylo-, myelo- and angiography as well as CT and MR imaging of the brain and spine) during their longstanding experience at the N. Burdenko Neurosurgical Institute in Moscow. The book begins with a review of modern neuroimaging techniques: CT and MR angiography, perfusion and diffusion imaging, tractography, spectroscopy and functional MR imaging. The problems and various other aspects of diagnosis of intra- and extra-axial

brain tumors (more than 30,000 verified cases) as well as of cerebrovascular, infectious, demyelinating, degenerative and traumatic brain and spine lesions are discussed. The volume is well illustrated with angiographic, CT and MR images of complex diagnostic studies. The numerous images represent a "visual text," which can be used as an atlas by practical clinicians. This book is a comprehensive reference manual for neurologists, neurotraumatologists and radiologists. It may also be of interest to technicians, medical physicists, students and other specialists interested in neurovisualization and diagnostic imaging.

Redesigning Continuing Education in the Health

Professions - Institute of Medicine 2010-03-12

Today in the United States, the professional health workforce is not consistently prepared to provide high quality health care and assure patient safety, even as the nation spends more per capita on health care than any other country. The absence of a comprehensive and well-integrated system of continuing education (CE) in the health professions is an important contributing factor to knowledge and performance deficiencies at the individual and system levels. To be most effective, health professionals at every stage of their careers must continue learning about advances in research and treatment in their fields (and related fields) in order to obtain and maintain up-to-date knowledge and skills in caring for their patients. Many health professionals regularly undertake a variety of efforts to stay up to date, but on a larger scale, the nation's approach to CE for health professionals fails to

support the professions in their efforts to achieve and maintain proficiency. Redesigning Continuing Education in the Health Professions illustrates a vision for a better system through a comprehensive approach of continuing professional development, and posits a framework upon which to develop a new, more effective system. The book also offers principles to guide the creation of a national continuing education institute.

The Efficient Society - Joseph Heath 2002-05-21

In this fascinating account of what makes Canada such a successful society, Joseph Heath celebrates the much-maligned value of efficiency and asks some searching questions about the

forces that threaten to undermine our quality of life. Canada is an efficient society, much more efficient than our neighbour to the south, where personal liberty takes precedence over collective well-being. This is one of the reasons, Heath argues, that the United Nations Annual Human Development Report consistently ranks Canada as the best place in the world to live. But this efficiency is under siege. Can we resist the allure of short-sighted tax cuts? Can we maintain our quality of life in the face of relentless pressure to increase our productivity - both at work and at home? This is a profound and important look at how government and business conspire to improve our lives - and at the dramatic changes that will decide our social and economic future.

A Hard Chance - Tom Gallant 2005

Tom and Melissa Gallant sat in their car at an intersection outside Lunenburg one early summer evening in 1992. After a decade of romance and adventure, they were at a

crossroads in their lives. Melissa wanted to settle down and start a business. Tom wanted to sail their schooner around the world. They had decided to go their separate ways. As they entered the intersection, one notorious for brutal accidents, their car was hit by a bus. When Tom woke up in the Fisherman's Memorial Hospital and asked about Melissa, all anyone could say was, "It doesn't look good." She was in intensive care in Halifax. She was in a coma, being kept alive by machines. This is the story of what happened in the months that followed. It is also the story of a love affair full of high seas adventure and romance, of life lived far from the conventions of polite society. It is the tale of two lives shattered in an instant, forever changed by an unmerciful twist of fate. Melissa's brain had suffered a catastrophic trauma. When she woke from the coma, she would not know who she was, or who Tom was. She would be unable to talk, walk or feed herself. Theirs was a love facing the greatest of challenges. This is a book

about redemption conferred by accepting the hardest things in life with an open heart. Tom Gallant is a playwright, musician, scriptwriter and journalist. Tom's poetry and prose has been included in magazines and anthologies. Tom has logged fifty thousand miles of deep water sailing in his Nova Scotian schooner. For a decade he has been a caregiver to his injured wife.
