Women Editing/editing

Women - Ann Hurley 2009

This collection of essays links current research in the writings and editing of early modern women and in those women who were themselves early editors with a new methodology of editing currently titled 'the new textualism'. As such, the collection seeks to solve two problems. The first concerns

the difficulty of editing the works of early modern women writers for whom there is little biographical data, a challenging task when the standard 'life and works' format is thus inhibited.

Second, related but slightly different, occurs because, although we know that there were women who edited in the early modern and even later periods, we know little about them as well. The new textualism approach to editing, which focuses on the material properties of the manuscript or book, its print or performance history and records of its dissemination, and the sociology of texts, provides a fruitful solution to both problems by broadening the concept of agency and hence provides a richer context for the production of a given text. The collection includes two sets of essays. One set has been reprinted from seminal works in the field of new textualism. These include writings by recognized figures like Jerome McGann, Leah Marcus, and Wendy Wall,

among others. As such, that set provides background for the reading of the second, a group of six original essays by scholars now working in the field of early modern women writers who directly apply aspects of the new textualism in their research. The fusion of the research field of retrieving early modern women writers with the practices of new textualist editing is thus the core of this collection of essays and is illustrative of what can be achieved in the field of editing when this new approach to texts is put into practice. ---Product Description.

The Art of Editing - Tim Groenland 2019-02-21

The place of the editor in literary production is an ambiguous and often invisible one, requiring close attention to publishing history and (often inaccessible) archival resources to bring it into focus. In *The Art of Editing*, Tim Groenland shows that the critical tendency to overlook the activities of editors and to focus on the solitary author figure neglects important

elements of how literary works are acquired, developed and disseminated. Focusing on selected works of fiction by Raymond Carver and David Foster Wallace, authors who represent stylistic touchstones for US fiction of recent decades, Groenland presents two case studies of editorial collaboration. Carver's early stories were integral to the emergence of the Minimalist movement in the 1980s, while Wallace's novels marked a generational shift towards a more expansive, maximal mode of narrative. The role of their respective editors, however, is often overlooked. Gordon Lish's part in shaping the form of Carver's early stories remains under-explored; analyses of Wallace's fiction, meanwhile, tend to minimise Michael Pietsch's role from the creation of *Infinite Jest* during the mid-1990s until the present day. Drawing on extensive archival research as well as interviews with editors and collaborators, Groenland illuminates the complex and often conflicting forms of

agency involved in the genesis of these influential works. The energies and tensions of the editing process emerge as essential factors in the creation of fictions more commonly understood within the paradigm of solitary authorship. The mediating role of the editor is, Groenland argues, inseparable from the development, form, and reception of these works.

Post-editing of Machine Translation - Laura Winther Balling 2014-03-17

Post-editing is possibly the oldest form of human-machine cooperation for translation. It has been a common practice for just about as long as operational machine translation systems have existed. Recently, however, there has been a surge of interest in post-editing among the wider user community, partly due to the increasing quality of machine translation output, but also to the availability of free, reliable

software for both machine translation and post-editing. As a result, the practices and processes of the translation industry are changing in fundamental ways. This volume is a compilation of work by researchers, developers and practitioners of post-editing, presented at two recent events on post-editing: The first Workshop on Post-editing Technology and Practice, held in conjunction with the 10th Conference of the Association for Machine Translation in the Americas, held in San Diego, in 2012; and the International Workshop on Expertise in Translation and Post-editing Research and Application, held at the Copenhagen Business School, in 2012.

A Poetics of Editing - Susan L. Greenberg 2018-09-03

This original and authoritative book offers a first-ever attempt to define a poetics of the

editing arts. It proposes a new field of editing studies, in which the 'ideal editor' can be understood in relation to the long-theorised author and reader. The book's premise is that editing, like other forms of 'making', is mostly invisible and can only be brought into full view through a comparative analysis that includes the insights of practitioners. The argument, laid down in careful layers, is supported by a panoramic historical narrative that tracks the shifts in textual authority from religious and secular institutions to the romanticised self of the digital present. The dangers posed by the anti-editing rhetoric of this hybrid romanticism are confronted head-on. To the traditional perception of editing as the imposition of closure, *A Poetics of Editing* adds a perspective on a dynamic process with a sense of the possible.

Gene Editing, Law, and the Environment - Irus Braverman 2018-11-11

Technologies like CRISPR and gene drives are ushering in a

new era of genetic engineering, wherein the technical means to modify DNA are cheaper, faster, more accurate, more widely accessible, and with more far-reaching effects than ever before. These cutting-edge technologies raise legal, ethical, cultural, and ecological questions that are so broad and consequential for both human and other-than-human life that they can be difficult to grasp. What is clear, however, is that the power to directly alter not just a singular form of life but also the genetics of entire species and thus the composition of ecosystems is currently both inadequately regulated and undertheorized. In *Gene Editing, Law, and the Environment*, distinguished scholars from law, the life sciences, philosophy, environmental studies, science and technology studies, animal health, and religious studies examine what is at stake with these new biotechnologies for life and law, both human and beyond.

How multimedia documentation and communication and groups of authors fit together are the main questions tackled. The book describes the

where the very best work goes undetected. Editors strive to create books that are enlightening, seamless, and pleasurable to read, all while giving credit to the author. This makes it all the more difficult to truly understand the range of roles they inhabit while shepherding a project from concept to publication. In *What Editors Do*, Peter Ginna gathers essays from twenty-seven leading figures in book publishing about their work. Representing both large houses and small, and encompassing trade, textbook, academic, and children's publishing, the contributors make the case for why editing remains a vital function to writers—and readers—everywhere. Ironically for an industry built on words, there has been a scarcity of written guidance on how to actually approach the work of editing. This book will serve as a compendium of professional advice and will be a resource both for those entering the profession (or already in it) and for those

outside publishing who seek an understanding of it. It sheds light on how editors acquire books, what constitutes a strong author-editor relationship, and the editor's vital role at each stage of the publishing process—a role that extends far beyond marking up the author's text. This collection treats editing as both art and craft, and also as a career. It explores how editors balance passion against the economic realities of publishing. *What Editors Do* shows why, in the face of a rapidly changing publishing landscape, editors are more important than ever.

Any scholar who hopes to attract a wider audience of readers will benefit from the brilliant, step-by-step guidance shared here. It's pure gold for all aspiring nonfiction writers."--Nancy MacLean, author of *Democracy in Chains: The Deep History of the Radical Right's Stealth Plan for America* Writing and revision

Drawing on before and after examples from more than a decade as a developmental editor of scholarly works, Pamela Haag tackles the most common challenges of scholarly writing. This book is packed with practical, user-friendly advice and is written with warmth, humor, sympathy, and flair. With an inspiring passion for natural language, Haag demonstrates how to reconcile clarity with intellectual complexity. Designed to be an in-the-trenches desktop reference, this indispensable resource can help scholars develop a productive self-editing habit, advise their graduate and other students on style, and, ultimately, get their work published and praised.
