**Managing Technology in Higher Education** -  
A. W. (Tony) Bates 2011-05-31  
Universities continue to struggle in their efforts to fully integrate information and communications technology within their activities. Based on examination of current

practices in technology integration at 25 universities worldwide, this book argues for a radical approach to the management of technology in higher education. It offers recommendations for improving governance, strategic planning, integration of administrative

and teaching services, management of digital resources, and training of technology managers and administrators. The book is written for anyone wanting to ensure technology is integrated as effectively and efficiently as possible.

*Opening Up Education* - Toru Iiyoshi 2008  
Online version of MIT Press book has brief overview of book's content and provides links to open access PDF version of ebook, as well as an iPaper version and a link to the MIT Press store for buying the print version. In this collection of essays the authors who are leaders in open education, explore the potential of open education to transform the economics and ecology of education. The authors argue that we must develop not only the technical capability but also the intellectual capacity for transforming tacit pedagogical knowledge into commonly usable and visible knowledge by providing incentives for faculty to use (and contribute to) open education goods, and by

looking beyond institutional boundaries to connect a variety of settings and open source entrepreneurs.

[Harmful Algal Blooms \(HABs\) and Public Health: Progress and Current Challenges](#) - 2016

Annotation Over the past decade, coastal and freshwater systems in the U.S. and worldwide have experienced an apparent increase in the frequency and geographic distribution of harmful algal blooms (HABs). These blooms can adversely affect both public health and ecosystem health. Toxin-producing HABs can accumulate in drinking and recreational waters and in foods of aquatic origin such as fish and seafood. Human and animal health risks include exposure to the toxins through eating contaminated food or drinking or swimming in contaminated water. Because of these potential public health risks, several countries and U.S. states have developed monitoring programs and guidelines for drinking and recreational water quality to protect public health. This special

issue will present research papers and reviews on various aspects of public health and environmental responses to harmful algal blooms. The subthemes considered include: - HAB monitoring for public health protection and response - Public health surveillance for HAB-related exposures and illnesses - Health risks from exposure to contaminated fish and shellfish, drinking and recreational water - Remediation and treatment technologies - Challenges and successes of HAB-related public health education campaigns and programs - HAB risk management.

**Eastern Old-Growth Forests** - Mary Byrd Davis 1996-04

Eastern Old-Growth Forests is the first book devoted exclusively to old growth throughout the East. Authoritative essays from leading experts examine the ecology and characteristics of

eastern old growth, explore its history and value -- both ecological and cultural -- and make recommendations for its preservation. The book provides a thorough overview of the importance of old growth in the East including its extent, qualities, and role in wildlands restoration. It will serve a vital role in furthering preservation efforts by making eastern old-growth issues better known and understood.

*Green Infrastructure Planning* - Ian Mell 2019  
What is green infrastructure? Why should we develop it? Who uses it? And what socioeconomic and ecological value does it provide? This useful guide provides an essential introduction to green infrastructure for planners, landscape architects, engineers, and environmentalists keen to understand how we can use landscape principles to deliver more sustainable urban planning. Using multiple examples from practice in the UK, Europe, North America, and Asia, the book illustrates how good policy ideas and innovative planning practice

can help create more sustainable and ecologically focused urban landscapes. [Creating Climate Wealth](#) - Jigar Shah 2013 "Creating Climate Wealth is about how climate change, the biggest challenge of our time, can be turned into a \$10 trillion dollar wealth-creating opportunity. Author Jigar Shah, internationally recognized for revolutionizing the now multi-billion-dollar solar energy industry, outlines how entrepreneurs and investors can unlock the massive potential that climate change represents. Shah argues that, while new technical innovation is valuable, deployment of existing technologies are the key to reaching our near-term climate targets. Rather than waiting for yet to be developed technology, business model innovation is the key to attract mainstream capital and unlock transformational change... Unlocking our next economy will be driven by thousands of companies deploying existing clean and resource-efficient technologies in electricity-supply (like solar),

transportation, building materials, industry, forestry, waste, and agriculture."--

### **Impacts of Climate Change on Human Health in the United States** - US Global Change Research Program 2018-02-06

As global climate change proliferates, so too do the health risks associated with the changing world around us. Called for in the President's Climate Action Plan and put together by experts from eight different Federal agencies, The Impacts of Climate Change on Human Health: A Scientific Assessment is a comprehensive report on these evolving health risks, including: Temperature-related death and illness Air quality deterioration Impacts of extreme events on human health Vector-borne diseases Climate impacts on water-related Illness Food safety, nutrition, and distribution Mental health and well-being This report summarizes scientific data in a concise and accessible fashion for the general public, providing executive summaries, key takeaways, and full-color diagrams and

charts. Learn what health risks face you and your family as a result of global climate change and start preparing now with *The Impacts of Climate Change on Human Health*.

**Physical and Chemical Processes in the Aquatic Environment** - Erik R. Christensen  
2014-09-15

There is need in environmental research for a book on fresh waters including rivers and lakes. Compared with other books on the topic, this book has a unique outline in that it follows pollution from sources to impact. Included in the text is the treatment of various tracers, ranging from pathogens to stable isotopes of elements and providing a comprehensive discussion which is lacking in many other books on pollution control of natural waters. Geophysical processes are discussed emphasizing mixing of water, interaction between water and the atmosphere, and sedimentation processes. Important geochemistry processes occurring in natural waters are described as are the processes

specific to nutrients, organic pollutants, metals, and pathogens in subsequent chapters. Each of these chapters includes an introduction on the selected groups, followed by the physicochemical properties which are the most relevant to their behavior in natural waters, and the theories and models to describe their speciation, transport and transformation. The book also includes the most up to date information including a discussion on emerging pollutants such as brominated and phosphate flame retardants, perfluorochemicals, and pharmaceutical and personal care products. Due to its importance an ecotoxicology chapter has been included featuring molecular biological methods, nanoparticles, and comparison of the basis of biotic ligand model with the Weibull dose-response model. Finally, the last chapter briefly summarizes the regulations on ambient water quality.

Games and Learning Alliance - Antonios Liapis  
2019-11-20

This book constitutes the refereed proceedings of the 8th International Conference on Games and Learning Alliance, GALA 2019, held in Athens, Greece, in November 2019. The 38 regular papers presented together with 19 poster papers were carefully reviewed and selected from 76 submissions. The papers cover the following topics: serious game design and pedagogical foundations; AI and technology for SG; gamification; applications and case studies; and posters. The chapter "Cyber Chronix, Participatory Research Approach to Develop and Evaluate a Storytelling Game on Personal Data Protection Rights and Privacy Risks" is available open access under a CC BY 4.0 license at [link.springer.com](http://link.springer.com).

*The Life of Ludwig van Beethoven (Vol. 1-3) -*

Alexander Wheelock Thayer 2020-04-22

The Life of Ludwig van Beethoven is the first scholarly biography of Ludwig van Beethoven, covering Beethoven's life to 1816. Thayer became aware of many discrepancies in the already existing biographies of Beethoven, so in 1849 he sailed for Europe to undertake his own researches, learning German and collecting information. Still after many updates Thayer's biography of Beethoven is regarded as a standard work of reference on the composer.

**Russian Challenges from Now Into the Next Generation** - Marie-Charlotte Pierre 2019-04-02

U.S. and Western relations with Russia remain challenged as Russia increasingly reasserts itself on the global stage. Russia remains driven by a worldview based on existential threats-real, perceived, and contrived. As a vast, 11-time zone Eurasian nation with major demographic and economic challenges, Russia faces multiple security dilemmas internally and along its vulnerable and expansive borders. Exhibiting a

reactive xenophobia stemming from a long history of destructive war and invasion along most of its borders, the collapse of the Soviet Union, the enlargement of the North Atlantic Treaty Organization, and perceived Western slights, Russia increasingly threatens others and lashes outward. However, time is not on Russia's side, as it has entered into a debilitating status quo that includes unnecessary confrontation with the West, multiple unresolved military commitments, a sanctions-strained and only partially diversified economy, looming domestic tensions, and a rising China directly along its periphery. Washington still has an opportunity to carefully improve U.S.-Russia relations and regain a more stable relationship in the near term, but only if activities and initiatives are based on a firm and frank appreciation of each other's core interests, including those of their allies and partners. In a dual-track approach, the United States and its allies must continue to work closely to deter any destabilizing Russian

behavior ranging from corrosive gray zone disinformation activities-including malign cyber efforts to erode Western democracies-up to full and overt military aggression. Simultaneously, rebuilding atrophied conduits between key American and Russian political and military leadership is imperative in order to calm today's distrustful and increasingly mean-spirited relations, to seek and positively act upon converging interests, and to avert potential incidents or accidents that could potentially lead to dangerous brinksmanship. Notably the July 2018 Trump-Putin summit failed to bring any positive developments to the U.S.-Russia relationship; however, pragmatic efforts to bridge major and increasingly dangerous divides must continue. Perhaps most notable during the summit was the emphasis made by both sides that the weakened arms control regimen and overall strategic stability be addressed to stop a dangerous drift toward renewed nuclear weapons development and competition. Yet in

recent months, the relationship has only continued to weaken on multiple fronts too numerous to summarize, including Russian actions against Ukraine in the Sea of Azov and the end of the 31-year Intermediate Nuclear Weapons Treaty signed in 1987 by Soviet Premier Mikhail Gorbachev and President Ronald Reagan.

*Proceeding of the International Science and Technology Conference "FarEastCon 2019"* - Denis B. Solovev 2020-04-13

This book presents the proceedings of the International Science and Technology Conference "FarEastCon 2019," which took place on October 1-4, 2019, in Vladivostok, Russian Federation. The conference provided a platform for gathering expert opinions on projects and initiatives aimed at the implementation of far-sighted scientific research and development, and allowed current theoretical and practical advances to be shared with the broader research community. Featuring

selected papers from the conference, this book will be of interest to experts in various fields whose work involves developing innovative solutions and increasing the efficiency of economic activities.

**Foot and Ankle Sports Orthopaedics** - Victor Valderrabano 2017-02-08

This book provides a comprehensive review of the diagnosis, management and treatment of sports injuries to the foot and ankle. The editors have assembled a list of contributors at the top of their field to define the medical management, treatment and surgery for the most common and highly debilitating sports injuries. Currently, foot and ankle injuries are the most common musculoskeletal injuries, thus this book fills the clear need for a state-of-the art resource that focuses upon this growing area of orthopaedic practice. Foot and Ankle Sports Orthopaedics is highly relevant to orthopaedic surgeons, sports orthopaedic surgeons and medical professionals dealing with sports injuries around the F&A.

Tacit Knowledge in the Workplace - 1999

"This is the final product of a six year effort to define, assess and measure tacit knowledge for leadership among U.S. Army officers. Tacit knowledge is defined as knowledge grounded in experience, intimately related to action, and not well supported by formal training and doctrine. Tacit knowledge for leadership was researched

at three different levels of command and developed into assessment inventories for each level. The assessment inventories have been construct validated and proven to predict certain leadership effectiveness ratings at each level and to do so better than measures of verbal reasoning ability, tacit knowledge for business managers, or experience. The report describes the constructs of "practical intelligence" and "tacit knowledge", other research related to them, the general methods used in assessing tacit knowledge, and the development of the Tacit Knowledge for Military Leaders inventories. There is also a chapter on the practical implications for leadership development and training. An expanded version of this report will appear as a commercially available book entitled, Practical Intelligence in Everyday Life by the same authors. " -- Stinet.

TensorFlow, Keras, and other Python libraries to implement smart AI applications

Description This book will be a perfect companion if you want to build insightful projects from leading AI domains using Python. The book covers detailed implementation of projects from all the core disciplines of AI. We start by covering the basics of how to create smart systems using machine learning and deep learning techniques. You will assimilate various neural network architectures such as CNN, RNN, LSTM, to solve critical new world challenges. You will learn to train a model to detect diabetic retinopathy conditions in the human eye and create an intelligent system for performing a video-to-text translation. You will use the transfer learning technique in the healthcare domain and implement style transfer using GANs. Later you will learn to build AI-based recommendation systems, a mobile app for sentiment analysis and a powerful chatbot for carrying customer services. You will

implement AI techniques in the cybersecurity domain to generate Captchas. Later you will train and build autonomous vehicles to self-drive using reinforcement learning. You will be using libraries from the Python ecosystem such as TensorFlow, Keras and more to bring the core aspects of machine learning, deep learning, and AI. By the end of this book, you will be skilled to build your own smart models for tackling any kind of AI problems without any hassle. What you will learn

Build an intelligent machine translation system using seq-2-seq neural translation machines

Create AI applications using GAN and deploy smart mobile apps using TensorFlow

Translate videos into text using CNN and RNN

Implement smart AI Chatbots, and integrate and extend them in several domains

Create smart reinforcement, learning-based applications using Q-Learning

Break and generate CAPTCHA using Deep Learning and Adversarial Learning

Who this book is for This book is intended for data scientists, machine

learning professionals, and deep learning practitioners who are ready to extend their knowledge and potential in AI. If you want to build real-life smart systems to play a crucial role in every complex domain, then this book is what you need. Knowledge of Python programming and a familiarity with basic machine learning and deep learning concepts are expected to help you get the most out of the book

**Empowering Student Researchers** - Bethanie Pletcher 2021-10-05

This yearbook is a project of the Consortium for Educational Development, Evaluation and Research (CEDER), the research and development arm of the College of Education and Human Development at Texas A&M University-Corpus Christi. With this edition of the CEDER Yearbook, the editors wished to

support student researchers as emerging scholars. Participating in research projects entails many benefits for students, including the onboarding of new teaching methods and strategies, becoming a reflective practitioner, engaging in a different model of professional learning, learning how to behave like a researcher, improving writing skills, and pursuing further degrees. Collaboration between faculty members and students (often teacher or pre-service teacher researchers) is critical (Brew, 2013; Johnson, 2000; Ries, 2018). Strickland (1988) posits that teacher researchers need to be engaged in every step of the research process and allowed to take ownership of the work. It should be thought of as helping to create lifelong researchers, for "if students are properly trained, prepared, and supervised, the student-faculty collaboration can be a memorable and successful experience. It may even inspire the career goal of a future professor or two" (Fenn, 2010, p. 259). The call

for proposals asked for empirical, conceptual and theoretical contributions to the area of research conducted by students. Personal Perspectives and Research Focus of students include the following categories: Culture, International Students, Men of Color, Teaching, Doctoral Students, Latino/a Culture, STEM, LBGTQ, Policy and Administration, Student Faculty, and Curriculum. The intended audience for this yearbook includes educators, decision-makers, policymakers, and leaders within faculty and student development programs as well as international student departments. A call for proposals was issued to a variety of universities and professional organizations. Two hundred and sixty-four articles from a total of 217 authors representing 72 universities were submitted. Those blinded articles were distributed to a panel of reviewers. Each article was seen by two reviewers and the editors of the yearbook. The editorial team selected 21 articles for inclusion in this yearbook.

**Innovations in Social Marketing and Public Health Communication** - Walter Wymer

2015-10-06

This volume presents the most current theoretical advances in the fields of social marketing and public health communications. The volume is divided in two parts. Part 1 contains chapters pertaining to research and theory reflecting improvements and contributions to theories that help improving quality of life. It includes literature reviews, conceptual research and empirical studies on social marketing communications, models to understand individual's risky behaviors, and how to improve social interventions. The second part emphasizes applied research, consisting of best practices, applied experiments, and case studies on social marketing innovative practices with implications for quality of life.

The Project Management Scorecard - Jack J. Phillips 2012-08-06

Return on Investment (ROI) remains one of the

most challenging and intriguing issues facing human resource development and performance improvement professionals. Drawing on their expertise in developing and implementing ROI programs in human performance and training, Jack J. Phillips, Ph.D., Timothy W. Bothell and G. Lynn Snead demonstrate how you can effectively apply ROI to project management. Today, almost every industry requires employees to manage multiple projects with competing priorities, critical deadlines, and unexpected interruptions—rendering everyone a project manager in some respect. Most employees feel the pressure of juggling any number of key projects simultaneously. Organizations have responded by investing large amounts of both time and money to improve project management, and most strive to justify the efforts and resources dedicated to improving this goal. 'The Project Management Scorecard' is a welcome relief for anyone managing a project or multiple projects, as well as the trainers, human resource

development staff, or supervisors charged with measuring, evaluating, and managing project managers. Project Management is one of the hottest topics in business management today, affecting nearly every individual in any organization across the globe. Let three HRD experts show you how to apply the hugely popular ROI process to the key organizational issue of successful project management including: \* Project management issues and challenges \* Measuring reaction and satisfaction \* How to calculate and interpret ROI \* Capturing business impact data \* Measuring skill and knowledge changes during the project \* Monitoring the true costs of the project solution \* Converting business measure to monetary values \* Forecasting ROI The authors' step-by-step approach allows you to begin the ROI process immediately. ### Ecology and Recovery of Eastern Old-Growth

Forests - Andrew M. Barton 2018-11-08

The landscapes of North America, including eastern forests, have been shaped by humans for millennia, through fire, agriculture, hunting, and other means. But the arrival of Europeans on America's eastern shores several centuries ago ushered in the rapid conversion of forests and woodlands to other land uses. By the twentieth century, it appeared that old-growth forests in the eastern United States were gone, replaced by cities, farms, transportation networks, and second-growth forests. Since that time, however, numerous remnants of eastern old growth have been discovered, meticulously mapped, and studied. Many of these ancient stands retain surprisingly robust complexity and vigor, and forest ecologists are eager to develop strategies for their restoration and for nurturing additional stands of old growth that will foster biological diversity, reduce impacts of climate change, and serve as benchmarks for how natural systems operate. Forest ecologists William Keeton and

Andrew Barton bring together a volume that breaks new ground in our understanding of ecological systems and their importance for forest resilience in an age of rapid environmental change. This edited volume covers a broad geographic canvas, from eastern Canada and the Upper Great Lakes states to the deep South. It looks at a wide diversity of ecosystems, including spruce-fir, northern deciduous, southern Appalachian deciduous, southern swamp hardwoods, and longleaf pine. Chapters authored by leading old-growth experts examine topics of contemporary forest ecology including forest structure and dynamics, below-ground soil processes, biological diversity, differences between historical and modern forests, carbon and climate change mitigation,

management of old growth, and more. This thoughtful treatise broadly communicates important new discoveries to scientists, land managers, and students and breathes fresh life into the hope for sensible, effective management of old-growth stands in eastern forests.
