Particle Physics: Perspectives And Opportunities  
- Report Of The Dpf Committee On Long-term  
Planning - Cahn Robert N 1995-09-20

The well-known Casimir effect has a direct analogue in systems near critical or multicritical points. Critical fluctuations in systems confined to finite geometries lead to attractive or repulsive forces between system boundaries.

These forces influence the formation of wetting layers of liquid  $^4\text{He}$  or binary liquid mixtures near critical points in these fluids. With the aid of recently developed versions of the atomic force microscope, these forces appear to be directly measurable. The book contains an introduction to the physics of critical phenomena and reviews the most recent developments in the theory of finite-size scaling. A detailed discussion of the Casimir effect and related questions follows. The analysis of quantitative effects on the specific heat of critical films, the formation of wetting layers, and force measurements finish the presentation. This is perhaps the first book on the critical Casimir effect.

**Training in Neurosurgery** - Hans-Jürgen Reulen 2012-12-06

An International Conference on "Neurosurgical Training and Reserach" was held in Munich from October 6 - 9, 1996, under the auspices of the EANS, and organized by H.-J. Reulen and H.-J. Steiger. Experts from different countries and neurosurgical organizations have collected information on the present status of resident training in neurosurgery and the mechanisms involved with the training. Various aspects, the recruitment process, the criteria used for selection, the contents and structure of a program, the continuous quality control, exposition to the art of research, fellowships and subspeciality training, etc. have been covered. The present book contains this material and thus provides a unique and comprehensive source of

information on the complex of modern neurosurgical training. " ... The beauty of this work is that it puts in one place the many varied aspects of a neurosurgical training program that one needs to be aware of ... should be required reading for the faculty of any academic training program as well as for others who may have a misconception of what residency training is ... an excellent book for any program director or active faculty member. It should be required reading for all faculty members before the next round of resident interviews ..." Neurosurgery "... well edited, published to a high standard and will naturally be of interest to those specifically involved in the areas of selection and training ... a useful text for aspirants to surgical training posts ..." **Active Safety and the Mobility Industry** - Delphi Corp. 2011-04-11

Safety is a key element in new vehicle design and active safety, together with driver distraction prevention, has become one of the most talked about issues in the mobility industry. This book features 20 SAE technical papers, originally published in 2009 and 2010, which showcase how the mobility industry is considering all aspects of safety in designing and producing safer vehicles. These papers were selected by SAE International's 2010 President Dr. Andrew Brown Jr., Executive Director and Chief Technologist for Delphi Corporation. The contents of this book explore a variety of safety

issues in the areas of market and consumer preferences; driver assistance and modeling; active safety system, crash sensing and sensor fusion; communications; and road safety. The publication also includes a number of articles authored by renowned experts in the field of active safety. This book is the second in the trilogy from SAE on "Safe, Green and Connected" vehicles in the mobility industry edited by Dr. Andrew Brown, Jr. The other two books in this trilogy are: Green Technologies and the Mobility Industry Connectivity and the Mobility Industry Buy a Combination of Books and Save! Green, Safe & Connected: The Future of Mobility *Regulating with RNA in Bacteria and Archaea* -

Gisela Storz 2020-07-10

Revealing the many roles of RNA in regulating gene expression For decades after the discoveries of messenger RNA, transfer RNA, and ribosomal RNA, it was largely assumed that the role of RNA in the cell was limited to shuttling the genomic message, chaperoning amino acids, and toiling in the ribosomes. Eventually, hints that RNA molecules might have regulatory roles began to appear. With the advent of genomics and bioinformatics, it became evident that numerous other RNA forms exist and have specific functions, including small RNAs (sRNA), RNA thermometers, and riboswitches to regulate core metabolic pathways, bacterial pathogenesis, iron homeostasis, quorum sensing, and biofilm formation. All of these functions, and more, are presented in *Regulating with RNA in Bacteria and Archaea*, written by RNA biologists from around the globe. Divided into eight sections- RNases and Helicases, Cis-Acting RNAs, Cis

Encoded Base Pairing RNAs, Trans-Encoded Base Pairing RNAs, Protein Titration and Scaffolding, General Considerations, Emerging Topics, and Resources-this book serves as an excellent resource for established RNA biologists and for the many scientists who are studying regulated cellular systems. It is no longer a fair assumption that gene expression regulation is the provenance of proteins only or that control is exerted primarily at the level of transcription. This book makes clear that regulatory RNAs are key partners along with proteins in controlling the complex interactions and pathways found within prokaryotes.

#### *Insects* - David B. Rivers 2017-04-15

An introduction to the intriguing world of insects, from bullet ants to butterflies. Designed as an introduction to the intriguing world of insect biology, this book examines familiar entomological topics in nontraditional ways. Author David B. Rivers gives important concepts relatable context through a pop culture lens, and he covers subjects that are not typical for entomology textbooks, including the impact of insects on the human condition, the sex lives of insects, why insects are phat but not fat, forensic entomology, and the threats that some insects pose to humanity. Each chapter presents clear and concise key concepts, chapter reviews, review questions following Bloom's taxonomy of learning, web links to videos and other resources, and breakout boxes (called Fly Spots) that capture student interest with unique and entertaining facts related to entomology. Focusing on both traditional and cutting-edge aspects of insect biology and packed with

extensive learning resources, *Insects* covers a wide range of topics suitable for life science majors, as well as non-science students, including: • the positive and negative influences of insects on everyday human life • insect abundance • insect classification (here presented in the context of social media) • insect feeding, communication, defense, and sex • how insects are responding to climate change • forensic entomology • how insects can be used as weapons of war • how insects relate to national security • why insects have wings • how to read pesticide labels

Panel Reports—"New Worlds, New Horizons in Astronomy and Astrophysics" - National Research Council 2011-05-18

Every 10 years the National Research Council releases a survey of astronomy and astrophysics outlining priorities for the coming decade. The most recent survey, titled *New Worlds, New Horizons in Astronomy and Astrophysics*, provides overall priorities and recommendations for the field as a whole based on a broad and comprehensive examination of scientific opportunities, infrastructure, and organization in a national and international context. Panel Reports--*New Worlds, New Horizons in Astronomy and Astrophysics* is a collection of reports, each of which addresses a key sub-area of the field, prepared by specialists in that subarea, and each of which played an important role in setting overall priorities for the field. The collection, published in a single volume, includes the reports of the following panels: *Cosmology and Fundamental Physics Galaxies Across*

Cosmic Time The Galactic Neighborhood Stars and Stellar Evolution Planetary Systems and Star Formation Electromagnetic Observations from Space Optical and Infrared Astronomy from the Ground Particle Astrophysics and Gravitation Radio, Millimeter, and Submillimeter Astronomy from the Ground The Committee for a Decadal Survey of Astronomy and Astrophysics synthesized these reports in the preparation of its prioritized recommendations for the field as a whole. These reports provide additional depth and detail in each of their respective areas. Taken together, they form an essential companion volume to New Worlds, New Horizons: A Decadal Survey of Astronomy and Astrophysics. The book of panel reports will be useful to managers of programs of research in the field of astronomy and astrophysics, the Congressional committees with jurisdiction over the agencies supporting this research, the scientific community, and the public.
