The ARML Power Contest - Thomas Kilkelly
2015-01-02

The ARML (American Regions Math League) Power Contest is truly a unique competition in which a team of students is judged on its ability to discover a pattern, express the pattern in precise mathematical language, and provide a logical proof of its conjectures. Just as a team of students can be self-directed to solve each problem set, a teacher, math team coach, or math circle leader could take these ideas and questions and lead students into problem solving and mathematical discovery. This book contains thirty-seven interesting and engaging problem sets from the ARML Power Contests from 1994

to 2013. They are generally extensions of the high school mathematics classroom and often connect two remote areas of mathematics. Additionally, they provide meaningful problem situations for both the novice and the veteran mathlete. Thomas Kilkelly has been a mathematics teacher for forty-three years. During that time he has been awarded several teaching honors and has coached many math teams to state and national championships. He has always been an advocate for more discovery, integration, and problem solving in the mathematics classroom. In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life, MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people, their parents and teachers, and the mathematics profession. Titles in this series are co-published with the Mathematical Sciences Research Institute (MSRI).

Sociological Paradigms and Organisational Analysis - Gibson Burrell 2017-03-02

The authors argue in this book that social theory can usefully be conceived in terms of four broad

paradigms, based upon different sets of meta-theoretical assumptions with regard to the nature of social science and the nature of society. The four paradigms - Functionalist, Interpretive, Radical Humanist and Radical Structuralist - derive from quite distinct intellectual traditions, and present four mutually exclusive views of the social work. Each stands in its own right, and generates its own distinctive approach to the analysis of social life. The authors provide extensive reviews of the four paradigms, tracing the evolution and inter-relationships between the various sociological schools of thought within each. They then proceed to relate theories of organisation to this wider background. This book covers a great range of intellectual territory. It makes a number of important contributions to our understanding of sociology and organisational analysis, and will prove an invaluable guide to theorists, researchers and students in a variety of social science disciplines. It stands as a

discourse in social theory, drawing upon the general area of organisation studies - industrial sociology, organisation theory, organisational psychology, and industrial relations - as a means of illustrating more general sociological themes. In addition to reviewing and evaluating existing work, it provides a framework for appraising future developments in the area of organisational analysis, and suggests the form which some of these developments are likely to take.

Born in a brothel, Ruth doesn't expect much for herself beyond abuse. While her sister's beauty affords a certain degree of comfort, Ruth's harsh looks set her on a path of drudgery. That is until she meets pugilist patron George Dryer and discovers her true calling—fighting bare knuckles in the prize rings of Bristol. Manor-born Charlotte has a different cross to bear. Scarred by smallpox, stifled by her social and romantic options, and trapped in twisted power games with her wastrel brother, she is desperate for an escape. After a disastrous, life-changing fight sidelines Ruth, the two women meet, and it alters the perspectives of both of them. When Charlotte presents Ruth with an extraordinary proposition, Ruth pushes dainty Charlotte to enter the ring herself and learn the power of her own strength. A gripping, page-turning story about people struggling to transcend the circumstances into which they were born and fighting for their own places in society, *The Fair Fight* is a raucous, intoxicating tale of courage,

reinvention, and fighting one's way to the top.
Anticipation and Medicine - Owen Dempsey
2018-10-09

Anticipation in Medicine: A Critical Analysis of the Science, Praxis and Perversion of Evidence Based Healthcare looks at an aspect of healthcare rarely addressed: how the capitalist interest in diagnosis and treatment impacts upon the patient and, by extension, the system of healthcare itself. Using Lacanian structures of discourse, Dr. Owen Dempsey critiques the praxis of scientific Evidence Based Medicine (EBM) applied to anticipatory and preventive healthcare under capitalism and ultimately, what constitutes good care. This book features up-to-date case studies that combine real-life patients and the psychological impacts of anticipatory care such as cancer screening in the modern era. The book identifies the dangers of anticipatory care in medicine and provides compelling and new possibilities for progressing towards a more emancipatory conception of a

less knowing, less apparently compassionate, as well as less harmful practice of health care. This is fascinating reading for academics, students and practitioners interested in critical health psychology, the practice of 'scientific' medicine, and the politics of health and social care.

Governing Habits - Eugene Raikhel 2016-11-07

Critics of narcology—as addiction medicine is called in Russia—decry it as being "backward," hopelessly behind contemporary global medical practices in relation to addiction and substance abuse, and assume that its practitioners lack both professionalism and expertise. On the basis of his research in a range of clinical institutions managing substance abuse in St. Petersburg, Eugene Raikhel increasingly came to understand that these assumptions and critiques obscured more than they revealed. *Governing Habits* is an ethnography of extraordinary sensitivity and awareness that shows how therapeutic practice and expertise is expressed in the highly specific, yet rapidly transforming milieu of hospitals,

clinics, and rehabilitation centers in post-Soviet Russia. Rather than interpreting narcology as a Soviet survival or a local clinical world on the wane in the face of globalizing evidence-based medicine, Raikhel examines the transformation of the medical management of alcoholism in Russia over the past twenty years. Raikhel's book is more than a story about the treatment of alcoholism. It is also a gripping analysis of the many cultural, institutional, political, and social transformations taking place in the post-Soviet world, particularly in Putin's Russia. *Governing Habits* will appeal to a wide range of readers, from medical anthropologists, clinicians, to scholars of post-Soviet Russia, to students of institutions and organizational change, to those interested in therapies and treatments of substance abuse, addiction, and alcoholism.

Sources, Effects and Risks of Ionizing Radiation, United Nations Scientific Committee on the Effects of Atomic Radiation (UNSCEAR) 2016 Report - United Nations Scientific Committee on the Effects of Atomic Radiation (UNSCEAR) 2017-04-25

This report assesses the levels and effects of exposure to ionizing radiation. Scientific findings underpin radiation risk evaluation and international protection standards. This report

comprises a report with two underpinning scientific annexes. The first annex recapitulates and clarifies the philosophy of science as well as the scientific knowledge for attributing observed health effects in individuals and populations to radiation exposure, and distinguishes between that and inferring risk to individuals and populations from an exposure. The second annex reviews the latest thinking and approaches to quantifying the uncertainties in assessments of risk from radiation exposure, and illustrates these approaches with application to examples that are highly pertinent to radiation protection. Resource Efficiency - Paul Ekins 2016

Despite enormous progress in the past decades towards improving human prosperity and well-being, this has come at the lasting cost of degradation of the natural environment and depletion of natural resources. Meeting the needs of a growing and increasingly affluent population, will require natural resource extraction to increase from 85 to 186 billion tons by 2050. This can cause irreversible environmental damage and endanger the capacity of Earth to continue to provide resources which are essential for human survival and development. Analysis in the report shows that policies and initiatives to improve resource efficiency and tackle climate change can reduce global resource extraction by up to 28 per cent while also boosting the value of world economic

activity by 1 per cent in 2050, against the baseline. Such policy actions can also cut global greenhouse gas emissions by around 60 per cent in 2050 relative to 2015 levels. This report has been produced by the UNEP's International Resource Panel in response to a request by leaders of the G7 nations in the context of efforts to promote resource efficiency as a core element of sustainable development. The report conducts a rigorous survey to assess and articulate the prospects and solutions for resource efficiency. It considers how more efficient use of resources can contribute to economic growth, employment and development, at the same time as reducing the world's use of materials, energy, biomass and water, and the resulting environmental impacts. The report documents many examples of best practices for increasing the resource efficiency of different sectors from countries around the world. The challenge for policy-makers is to learn from and scale up these good practices, and to conceive and implement a set

of transformative policies that will enable countries to reap the associated social, environmental and economic benefits.

Use of Dietary Supplements by Military Personnel - Institute of Medicine 2008-10-31
Dietary supplements are widely available through a rapidly expanding market of products commonly advertised as beneficial for health, performance enhancement, and disease prevention. Given the importance and frequent evaluation of physical performance and health as a criteria to join and remain in the military, the use of these products by military personnel has raised concern regarding over-all and long-term efficacy and safety. This evaluation is especially difficult, as many of these supplements contain multiple ingredients, have a changing composition over time, or are used intermittently

at doses difficult to measure. This book analyzes the patterns of dietary supplement use among military personnel, examines published reviews of the scientific evidence, and identifies those dietary supplements that are beneficial and/or warrant concern due to risks to health or performance. The book also recommends a system to monitor adverse health effects and a framework to identify the need for active management of dietary supplements by military personnel. Military policy makers, personnel, and recruits will find this book useful, as will nutritionists, athletes, and others working in strenuous environments.

Medinfo - Marius Fieschi 2004

A fundamental challenge for medical informatics is to develop and apply better ways of understanding how information technologies and methods can help support the best care for every patient every day given available medical knowledge and resources. In order to provide the most effective healthcare possible, the activities of teams of health professionals have to be coordinated through well-designed processes centered on the needs of patients. For information systems to be accepted and used in

such an environment, they must balance standardization based on shared medical knowledge with the flexibility required for customization to the individual patient. Developing innovative approaches to design and build evidence-based careflow management systems is essential for providing the knowledge management infrastructure of health care organizations that seeks to increase performance in delivering high quality care services by efficiently exploiting available resources. Parallel challenges arise in the organization of research at the biological and clinical levels, where the focus on systematically organizing and supporting processes of scientific inquiry by novel informatics methods and databases are in their very early stages. These Proceedings of Medinfo 2004 demonstrate the base of knowledge medical informatics professionals will collectively draw upon in the years ahead to meet these challenges and realize opportunities.
