The Anthropology of Resource Extraction -

Lorenzo D'Angelo 2022-01-14

This book offers an overview of the key debates in the burgeoning anthropological literature on resource extraction. Resources play a crucial role in the contemporary economy and society, are required in the production of a vast range of consumer products and are at the core of geopolitical strategies and environmental concerns for the future of humanity. Scholars have widely debated the economic and sociological aspects of resource management in our societies, offering interesting and useful abstractions. However, anthropologists offer different and fresh perspectives - sometimes complementary and at other times alternative to these abstractions - based on field researches conducted in close contact with those actors (individuals as well as groups and institutions)

that manipulate, anticipate, fight for, or resist the extractive processes in many creative ways. Thus, while addressing questions such as: "What characterizes the anthropology of resource extraction?", "What topics in the context of resource extraction have anthropologists studied?", and "What approaches and insights have emerged from this?", this book synthesizes and analyses a range of anthropological debates about the ways in which different actors extract, use, manage, and think about resources. This comprehensive volume will serve as a key reading for scholars and students within the social sciences working on resource extraction and those with an interest in natural resources, environment, capitalism, and globalization. It will also be a useful resource for practitioners within mining and development.

Essentials of Landscape Ecology - Kimberly A. With 2019-07-01

Human activity during the Anthropocene has transformed landscapes worldwide on a scale that rivals or exceeds even the largest of natural forces. Landscape ecology has emerged as a science to investigate the interactions between natural and anthropogenic landscapes and ecological processes across a wide range of scales and systems: from the effects of habitat or

resource distributions on the individual movements, gene flow, and population dynamics of plants and animals; to the human alteration of landscapes affecting the structure of biological communities and the functioning of entire ecosystems; to the sustainable management of natural resources and the ecosystem goods and services upon which society depends. This novel and comprehensive text presents the principles, theory, methods, and applications of landscape ecology in an engaging and accessible format that is supplemented by numerous examples and case studies from a variety of systems, including freshwater and marine "scapes".

Biological Anthropology - Craig Britton Stanford 2013

This textbook presents a survey of physical anthropology, the branch of anthropology that studies the physical development of the human species. It plays an important part in the study of human origins and in the analysis and identification of human remains for legal

purposes. It draws upon human body measurements, human genetics, and the study of human bones and includes the study of human brain evolution, and of culture as neurological adaptation to environment. The authors use the progressive term "biological anthropology" to mean "an integrative combination of information from the fossil record and the human skeleton, genetics of individuals and of populations, our primate relatives, human adaptation, and human behavior."
