

Dizionario Bitcoin Italiano Glossario Ragionato Sul Mondo Bitcoin Per I Meno Esperti

If you ally compulsion such a referred **Dizionario Bitcoin Italiano Glossario Ragionato Sul Mondo Bitcoin Per I Meno Esperti** ebook that will come up with the money for you worth, acquire the unconditionally best seller from us currently from several preferred authors. If you desire to comical books, lots of novels, tale, jokes, and more fictions collections are furthermore launched, from best seller to one of the most current released.

You may not be perplexed to enjoy every books collections Dizionario Bitcoin Italiano Glossario Ragionato Sul Mondo Bitcoin Per I Meno Esperti that we will extremely offer. It is not around the costs. Its more or less what you habit currently. This Dizionario Bitcoin Italiano Glossario Ragionato Sul Mondo Bitcoin Per I Meno Esperti , as one of the most vigorous sellers here will agreed be in the middle of the best options to review.

Transferring Human Impedance Regulation Skills to Robots - Arash Ajoudani

2015-11-05

This book introduces novel thinking and techniques to the control of robotic manipulation.

In particular, the concept of teleimpedance control as an alternative method to bilateral force-reflecting teleoperation control for robotic manipulation is introduced. In teleimpedance control, a

compound reference command is sent to the slave robot including both the desired motion trajectory and impedance profile, which are then realized by the remote controller. This concept forms a basis for the development of the controllers for a robotic arm, a dual-arm setup, a synergy-driven robotic hand, and a compliant exoskeleton for improved interaction performance.

A Handbook for Student Performance Assessment in an Era of Restructuring -

Robert E. Blum 1996-01-01
This handbook is designed to help school staff members and others broaden their view of assessment and put assessment into the broader context of school restructuring while keeping the focus on students. The handbook is arranged in sections, each dealing with a separate topic. Each section contains a number of papers by different authors that represent the best thinking on the topic. Each section begins with an overview that discusses the major perspectives, ideas,

issues, and concerns that relate to the section topic and describes how each paper fits into this fabric. The sections are: (1) "Setting the Stage"; (2) "Placing Student Performance Assessment within the Context of School Restructuring"; (3) "Developing Student Learning Goals for the 21st Century"; (4) "Aligning Assessment with Curriculum and Instruction"; (5) "Designing Performance Tasks"; (6) "Establishing Performance Criteria"; (7) "Using Performance Assessment Information for Improvement"; and (8) "Implementing Performance Assessment." In all, there are 98 papers in the handbook and 3 "resources": a glossary, a list of assessment information sources, and a list of contributors. Most of the articles contain references and illustrations. (SLD)
Bitcoin Money - Michael Caras 2021-11
The kids in Bitville realize they need a tool to help them trade with each other. Suddenly a strange boy moves to town and suggests a new idea...Bitcoin

Money is a story for all ages which helps answer the question "Why Bitcoin?"

Information Structure and its Interfaces - Lunella Mereu
2009-02-26

The volume presents recent results in the field of Information Structure based on research on Italian and Italian dialects, and on further studies on several typologically different languages. The central idea is that Information Structure is not an exclusive matter of syntax but an interface issue which involves the interplay of at least the phonological, morpho-syntactic and semantic-pragmatic levels of analysis. In addition, the volume is based on the study of actual language use and it adopts a cross-linguistic point of view.

Handbook of Intelligence Studies - Loch K. Johnson
2007-01-24

This topical volume offers a comprehensive review of secret intelligence organizations and activities. Intelligence has been in the news consistently since 9/11 and the Iraqi WMD errors.

Leading experts in the field approach the three major missions of intelligence: collection-and-analysis; covert action; and counterintelligence. Within each of these missions, the dynamically written essays dissect the so-called intelligence cycle to reveal the challenges of gathering and assessing information from around the world. Covert action, the most controversial intelligence activity, is explored, with special attention on the issue of military organizations moving into what was once primarily a civilian responsibility. The authors furthermore examine the problems that are associated with counterintelligence, protecting secrets from foreign spies and terrorist organizations, as well as the question of intelligence accountability, and how a nation can protect its citizens against the possible abuse of power by its own secret agencies. The Handbook of Intelligence Studies is a benchmark publication with major importance both for

current research and for the future of the field. It is essential reading for advanced undergraduates, graduate students and scholars of intelligence studies, international security, strategic studies and political science in general.

Il Friuli orientale. Studi.
[With a map.] - Prospero ANTONINI (Count.) 1865

Inequality in Financial Capitalism - Pasquale Tridico
2017-03-16

Recently, the issue of inequality has regained attention in the economic and political debate. This is due to both an increase in income inequality, in particular among rich countries, and an increasing interest in this issue by researchers and politicians. In the last three decades, income inequality among rich countries increased. This period also witnessed the growth of "financial capitalism", characterised by the strong dependency of economies on the financial sector, by the globalisation and

intensification of international trade and capital mobility, and by the "flexibilisation" of labour markets and the reduction of wage shares. From the 1980s to the present day, this book considers the theoretical aspects of inequality (its foundations, definitions, approaches and origins) and examines empirical evidence of income inequality in a wide range of advanced economies. The key arguments in this volume are that income inequality increased during this period because labour and welfare became seen as costs to be compressed in "financial capitalism" rather than as a fundamental part of aggregate demand to be expanded. However, the welfare state is not a drain on economic performance and competitiveness, nor is it a barrier to economic efficiency. Instead, it is demonstrated that in countries that adopt "welfare capitalism", welfare state expenditure not only contributes to a reduction in inequality but also fosters economic growth. Inequality in

Financial Capitalism is of great importance to those who study economics, political economy, labour economics and globalisation.

The Peak Performing Organization - Ronald J. Burke
2008-11-26

Building a peak performing organization is not easy or else everybody would be achieving this goal. Organizations today are facing heightened challenges in remaining competitive in a more demanding global business environment. New technology, customer expectation, outsourcing, low cost competitors and needs for both higher performance and more innovation from employees are only a few of these. In this book Burke and Cooper present an international collection of current research and new perspectives, examining why people and human resource management matter to the success of organizations and presenting examples of efforts to build more satisfying and effective organizations that have worked. The book

includes chapters on organizational processes as well as organizational strategies and design. The former includes performance management, building employee engagement, developing psychological capital (e.g., resilience, self-esteem), managing talent, supporting teams and inspiring leaders at all levels of the organization. The latter tackles how to develop and sustain an ethical organizational culture, fostering the ability to cork across cultures (cultural agility), employer branding, the sustainable organization and improving corporate governance practices. These chapters offer suggestions as to how organizations can embrace the need for continual change.

Gorham Silver - Elizabeth A. Williams 2019-05

Open Innovation - Henry William Chesbrough 2006

In today's information-rich environment, companies can no longer afford to rely entirely on their own ideas to advance

their business, nor can they restrict their innovations to a single path to market. As a result, says Harvard Business School professor Henry W. Chesbrough, the traditional model for innovation--which has been largely internally focused, closed off from outside ideas and technologies--is becoming obsolete. Emerging in its place is a new paradigm, open innovation, which strategically leverages internal and external sources of ideas and takes them to market through multiple paths. This path-breaking analysis is based on extensive field research, academic study, and the authors own longtime experience working in Silicon Valley. Through rich descriptions of the innovation processes of Xerox, IBM, Lucent, Intel, Merck, and Millennium, and the many spin-offs that have emerged from these firms, Open Innovation shows how companies can use their business model to identify a more enlightened role for R&D in a world of abundant information, better manage

and access intellectual property, advance their current business, and grow their future business. Arguing that companies in all industries must transform the way they commercialize knowledge, Chesbrough convincingly shows how open innovation can unlock the latent economic value in a companys ideas and technologies.

Emerging Adulthood in a European Context - Rita

Žukauskienė 2015-12-07

Emerging adulthood has been identified as an important developmental stage, characterised by identity exploration, instability and open possibilities, in which young people are no longer adolescents but have not yet attained full adult status. This ground-breaking edited collection is the first book to offer a comprehensive overview of emerging adulthood in a European context, which includes a comparison of findings in 9 different European countries and the USA.???

Each chapter, written by a leading European

researcher, describes the socio-demographic characteristics of emerging adults, reviews the state of the field, synthesises new findings, and provides suggestions for how to move forward in research, interventions, and policy. The book examines how the traditional domain markers of adulthood, such as finishing education and caring for children, have changed. It also highlights how different factors such as gender, working status, living arrangements, romantic status and parental educational background affect the importance assigned to each set of adulthood criteria. The theory of emerging adulthood is further developed by considering how Arnett's emerging adulthood, Erikson's early adulthood, and Robinson's theory of early adult crisis fit together, and data is provided to support the new framework given. The book will be of great interest to researchers interested in these developmental transitions, and to advanced students of Emerging Adulthood on

developmental psychology and lifespan courses, and related disciplines.

Religious Conversion - Sante De Sanctis 1999

First Published in 1999.

Routledge is an imprint of Taylor & Francis, an informa company.

Developments in

International Law Vol 18 -

Louis Henkin 1995

This volume derives from a series of lectures delivered as the 'general course' at the Hague Academy of International law in July 1989. Like those lectures, this volume does not pretend to provide a complete treatise covering all international law. Rather, it offers a particular perspective on the principal subjects of traditional international law, elaborates new developments, and dares reexamine assumptions and premises. The book is built on three themes. The first addresses law as politics, and international law as the law of a political system, now comprised of more than 180 separate, independent states. The essential autonomy

of states accounts for the political (as well as economic and cultural) heterogeneity in a pluralist and fragmented system, and international law as its common denominator of normative expression. A second theme explores change in international law as reflecting change in the values and purposes of the international political system. It traces the pursuit through law of the traditional ideal of the state system to secure every state's right to realize its own agenda through its own institutions, and the superimposed contemporary purpose to promote individual human rights and welfare in every society. The third theme perceives a movement in the law from 'conceptualism' to 'functionalism', from logical deduction out of abstract principles to pragmatic attention to practical needs and solutions to new and old human problems. Each of these themes dominates in several chapters but the other themes are not absent from any of them. Each will add a fresh

perspective and contribute to understanding the nature and operation of international law in the international political system at the turn of a new century.

La responsabilità sociale d'impresa tra diritto societario e diritto internazionale - M. Castellaneta 2019

Pervasive Games - Markus Montola 2009-06-12

Emerging quickly from the fast-paced growth of mobile communications and wireless technologies, pervasive games provide a worldwide network of potential play spaces. Now games can be designed to be played in public spaces like conferences, museums, communities, cities, buildings or other non-traditional game venues...and game designers need to unde

Dante Vivo - Giovanni Papini 1935

International Handbook of Financial Literacy - Carmela Aprea 2016-03-24

This Handbook presents in-depth research conducted on a

myriad of issues within the field of financial literacy. Split into six sections, it starts by presenting prevalent conceptions of financial literacy before covering financial literacy in the policy context, the state and development of financial literacy within different countries, issues of assessment and evaluation of financial literacy, approaches to teaching financial literacy, and teacher training and teacher education in financial literacy. In doing so, it provides precise definitions of the construct of financial literacy and elaborates on the state and recent developments of financial literacy around the world, to show ways of measuring and fostering financial literacy and to give hints towards necessary and successful teacher trainings. The book also embraces the diversity in the field by revealing contrasting and conflicting views that cannot be bridged, while at the same time making a contribution by re-joining existing materials in

one volume which can be used in academic discourse, in research-workshops, in university lectures and in the definition of program initiatives within the wider field of financial literacy. It allows for a landscape of financial literacy to be depicted which would foster the implementation of learning opportunities for human beings for sake of well-being within financial living-conditions. The Handbook is useful to academics and students of the topic, professionals in the sector of investment and banking, and for every person responsible for managing his or her financial affairs in everyday life.

Litigating Fiduciary Duty Claims - Jason R. Domark 2022

"This book is a practical guide for lawyers who are either beginning a fiduciary litigation practice or who are handling a fiduciary duty case in an unfamiliar area"--

Modelling Cyber Security - Umberto Gori 2009

"Proceedings of the NATO Advanced Research Workshop

on Operational Network Intelligence: Today and Tomorrow, Venice, Italy, 5-7 February 2009"--Title page verso.

The Little Bitcoin Book - Timi Ajiboye 2019-08-14

You've probably heard about Bitcoin on the news or heard it being discussed by your friends or colleagues. How come the price keeps changing? Is Bitcoin a good investment? How does it even have value? Why do people keep talking about it like it's going to change the world? The Little Bitcoin Book tells the story of what's wrong with money today, and why Bitcoin was invented to provide an alternative to the current system. It describes in simple terms what Bitcoin is, how it works, why it's valuable, and how it affects individual freedom and opportunities of people everywhere - from Nigeria to the Philippines to Venezuela to the United States. This book also includes a Q & A section with some of the most frequently asked questions about Bitcoin. If you want to

learn more about this new form of money which continues to gain interest and adoption around the world, then this book is for you.

Novacene - James Lovelock 2019-08-27

The originator of the Gaia theory offers the vision of a future epoch in which humans and artificial intelligence together will help the Earth survive. James Lovelock, creator of the Gaia hypothesis and the greatest environmental thinker of our time, has produced an astounding new theory about future of life on Earth. He argues that the Anthropocene—the age in which humans acquired planetary-scale technologies—is, after 300 years, coming to an end. A new age—the Novacene—has already begun. In the Novacene, new beings will emerge from existing artificial intelligence systems. They will think 10,000 times faster than we do and they will regard us as we now regard plants. But this will not be the cruel, violent machine takeover of the

planet imagined by science fiction. These hyperintelligent beings will be as dependent on the health of the planet as we are. They will need the planetary cooling system of Gaia to defend them from the increasing heat of the sun as much as we do. And Gaia depends on organic life. We will be partners in this project. It is crucial, Lovelock argues, that the intelligence of Earth survives and prospers. He does not think there are intelligent aliens, so we are the only beings capable of understanding the cosmos. Perhaps, he speculates, the Novacene could even be the beginning of a process that will finally lead to intelligence suffusing the entire cosmos. At the age of 100, James Lovelock has produced the most important and compelling work of his life.

INNOVATION, ECONOMIC DEVELOPMENT, AND INTELLECTUAL PROPERTY IN INDIA AND - Kung-Chung Liu
2019-01-01

This open access book analyses intellectual property and

innovation governance in the development of six key industries in India and China. These industries are reflective of the innovation and economic development of the two economies, or of vital importance to them: the IT Industry, the film industry, the pharmaceutical industry, plant varieties and food security, the automobile industry, and the sharing economy. The analysis extends beyond the domain of IP law, and includes economics and policy analysis. The overarching concerns of the book are how the examined industries have developed in the two countries, what role state innovation policy and/or IP policy has played in such development, what the nature of the state innovation policy/IP policy is, whether such policy has been causal, facilitating, crippling, co-relational, or simply irrelevant, and whether there is a possibility of synergy between the two economies. The book also inquires as to why and how one specific industry has developed in one country and not in the other,

and what India and China can learn from each other. The book provides a real-life understanding of how IP laws interact with innovation and economic development in the six selected economic sectors in China and India. The reader can also draw lessons from the success or failure of these sectors. --

Scientific Contributions - Tropical Plant Research Foundation, Washington D. C. 1926

Carnival of the Damned - Gregory L. Norris 2014-08-25
Fifteen tales of dark attractions just waiting for the next wary soul to offer the price of admission. SHOOT the Freak - win a prize! HAVE your caricature drawn? The price is right! GAZE upon the wonders our Oddities tent conceals! TRY the Ferris Wheel - it's the ride of a lifetime! WATCH the big top's center ring fill with beasts beyond imagination SEE a reflection of your darkest desires! LIVE in a world where maniacal clowns rule the night! These are just some of the

nightmares this carnival has to offer.

Models in Contemporary Sciences - Massimo Negrotti 2004

Models and theories are tools for scientific and technological investigations and projects. The relationship between theories and models is very complex. Models have become increasingly popular in our time, maybe due to the growing number of disciplines that try to understand, simulate or even reproduce very complex phenomena such as life, intelligence, organisms, brain processes, and social or economical systems. The papers in this book deal with methodological and application problems which arise when models are compared to theories, or when theories are used to build models.

Not to Sound Like a Psycho: But I'm Kinda Happy that You're Dead - Alice Sofía Gavilán Cerón 2021-11-16
Is your work environment TOXIC? Relax. All offices are alike: there's gossip, competition, backstabbing,

extra hours, affairs you'd be better off not hearing about, interns, cougars, sass, promotions, dead people... Wait, what? Dead people? *Working-Class Network Society* - Jack Linchuan Qiu 2009-01-30 An examination of how the availability of low-end information and communication technology has provided a basis for the emergence of a working-class network society in China. The idea of the "digital divide," the great social division between information haves and have-nots, has dominated policy debates and scholarly analysis since the 1990s. In *Working-Class Network Society*, Jack Linchuan Qiu describes a more complex social and technological reality in a newly mobile, urbanizing China. Qiu argues that as inexpensive Internet and mobile phone services become available and are closely integrated with the everyday work and life of low-income communities, they provide a critical seedbed for the emergence of a new working class of "network

labor" crucial to China's economic boom. Between the haves and have-nots, writes Qiu, are the information "have-less": migrants, laid-off workers, micro-entrepreneurs, retirees, youth, and others, increasingly connected by cybercafés, prepaid service, and used mobile phones. A process of class formation has begun that has important implications for working-class network society in China and beyond. Qiu brings class back into the scholarly discussion, not as a secondary factor but as an essential dimension in our understanding of communication technology as it is shaped in the vast, industrializing society of China. Basing his analysis on his more than five years of empirical research conducted in twenty cities, Qiu examines technology and class, networked connectivity and public policy, in the context of massive urban reforms that affect the new working class disproportionately. The transformation of Chinese society, writes Qiu, is

emblematic of the new technosocial reality emerging in much of the Global South.

Italian Historical Rural

Landscapes - Mauro Agnoletti
2012-12-09

Sustainable development and rural policies have pursued strategies where farming has been often regarded as a factor deteriorating the ecosystem.

But the current economic, social and environmental problems of the Earth probably call for examples of a positive integration between human society and nature. This research work presents more than a hundred case studies where the historical relationships between man and nature have generated, not deterioration, but cultural, environmental, social and economic values. The results show that is not only the economic face of globalization that is negatively affecting the landscape, but also inappropriate environmental policies. The CBD-UNESCO program on biocultural diversity, the FAO Globally Important Agricultural

Heritage Systems and several projects of the International Union of Forest Research Organizations, as well as European rural policies acknowledge the importance of cultural values associated to landscape. This research intends to support these efforts.

International Intellectual Property Law - Paul Goldstein 2008

This casebook organizes contemporary foreign, as well as U.S., case law and literature to equip law students with the knowledge they need to engage in international intellectual property practice, in both transactional and litigation settings. Carefully selected materials also expose students to the social, economic, and cultural considerations that underpin intellectual property law around the world. Each field of law - copyright, patent, trademark, unfair competition, trade secrets, industrial design - is introduced by a comprehensive author's note placing the field in its international and comparative

law context, and extensive notes on the cases and materials fill in relevant details, including currently and historically important topics.

Liability Arising from Transport of Dangerous Goods by Road - Claudio D'Alonzo 2021

The Deportation Machine -

Adam Goodman 2020-06-23

"By most accounts, the United States has deported around five million people since 1882- but this includes only what the federal government calls "formal deportations." "Voluntary departures," where undocumented immigrants who have been detained agree to leave within a specified time period, and "self-deportations," where undocumented immigrants leave because legal structures in the United States have made their lives too difficult and frightening, together constitute 90% of the undocumented immigrants who have been expelled by the federal government. This brings the number of deportees to fifty-six million. These forms

of deportation rely on threats and coercion created at the federal, state, and local levels, using large-scale publicity campaigns, the fear of immigration raids, and detentions to cost-effectively push people out of the country. Here, Adam Goodman traces a comprehensive history of American deportation policies from 1882 to the present and near future. He shows that one of the country's largest deportation operations expelled hundreds of thousands of people almost exclusively through the use of voluntary departures and through carefully-planned fear campaigns that terrified undocumented immigrants through newspaper, radio, and television publicity. These deportation efforts have disproportionately targeted Mexican immigrants, who make up half of non-citizens but 90% of deportees. Goodman examines the political economy of these deportation operations, arguing that they run on private transportation

companies, corrupt public-private relations, and the creation of fear-based internal borders for long-term undocumented residents. He grounds his conclusions in over four years of research in English- and Spanish-language archives and twenty-five oral histories conducted with both immigration officials and immigrants-revealing for the first time the true magnitude and deep historical roots of anti-immigrant policy in the United States

Discrimination and Privacy in the Information Society -

Bart Custers 2012-08-11

Vast amounts of data are nowadays collected, stored and processed, in an effort to assist in making a variety of administrative and governmental decisions. These innovative steps considerably improve the speed, effectiveness and quality of decisions. Analyses are increasingly performed by data mining and profiling technologies that statistically and automatically determine patterns and trends. However,

when such practices lead to unwanted or unjustified selections, they may result in unacceptable forms of discrimination. Processing vast amounts of data may lead to situations in which data controllers know many of the characteristics, behaviors and whereabouts of people. In some cases, analysts might know more about individuals than these individuals know about themselves. Judging people by their digital identities sheds a different light on our views of privacy and data protection. This book discusses discrimination and privacy issues related to data mining and profiling practices. It provides technological and regulatory solutions, to problems which arise in these innovative contexts. The book explains that common measures for mitigating privacy and discrimination, such as access controls and anonymity, fail to properly resolve privacy and discrimination concerns. Therefore, new solutions, focusing on technology design,

transparency and accountability are called for and set forth.

The Reconstruction of Space and Time - Rich Ling

2011-12-31

One of the most significant and obvious examples of how mobile communication influences our understanding of time and space is how we coordinate with one another. Mobile communication enables us to call specific individuals, not general places. Regardless of location, we are able to make contact with almost anyone, almost anywhere. This advancement has changed, and continues to change, human interaction. Now, instead of agreeing on a particular time well beforehand, we can iteratively work out the most convenient time and place to meet at the last possible moment--on the way to the meeting or once we arrive at the destination. In their early days, mobile devices were primarily used for various types of emergency situations and for work. In some cases, the device was an essential

element in various business operations or used so that overseas workers could communicate with their families. The distance between a remote posting and the people back home was suddenly and dramatically reduced. People began to share these devices not necessarily out of economic issues, but also questions of family and interpersonal dynamics. The process of sharing decisions as to who is a legitimate partner makes the nature of relationships more explicit. By examining the economy of sharing, we not only see how sharing mobile phones restructures social space, but are also given insight into an individual's web of interactions. This cutting-edge book deals with modern ways of thinking about communication and human interaction; it will illuminate the ways in which mobile communication alters our experience with space and time.

Bitcoin Manifesto: ONE CPU ONE VOTE - Satoshi

Nakamoto 2014-12-10
Original annotated and commented edition of the masterpiece of the mysterious Satoshi Nakamoto, inventor of Bitcoin, the digital currency on everyone's lips. However, few noticed that the innovative power of Bitcoin is not strictly financial, but it fundamentally impacts the creation of political consensus, by transforming it into a technological mechanism. Exactly for this reason, the present edition is enriched by a critical apparatus that should make possible, even for the less tech-savvy reader, to comprehend and reflect on such a key phenomenon of our times.

Il piano nella liquidazione giudiziale con esercizio provvisorio - FERRI ANDREA
2021-03-30

Contemporary Morphology -
Wolfgang U. Dressler
1990-01-01

TRENDS IN LINGUISTICS is a series of books that open new perspectives in our understanding of language. The series publishes state-of-

the-art work on core areas of linguistics across theoretical frameworks as well as studies that provide new insights by building bridges to neighbouring fields such as neuroscience and cognitive science. TRENDS IN LINGUISTICS considers itself a forum for cutting-edge research based on solid empirical data on language in its various manifestations, including sign languages. It regards linguistic variation in its synchronic and diachronic dimensions as well as in its social contexts as important sources of insight for a better understanding of the design of linguistic systems and the ecology and evolution of language. TRENDS IN LINGUISTICS publishes monographs and outstanding dissertations as well as edited volumes, which provide the opportunity to address controversial topics from different empirical and theoretical viewpoints. High quality standards are ensured through anonymous reviewing.

Islamic Financial Law -

Tommaso Vito Russo 2021

Risk and Uncertainty in the Art World - Anna M. Dempster
2014-04-10

This edited book offers the first complete overview of risk in the art market by bringing together contributions from a wide range of international thought-leaders on the topic - both practitioners and leading scholars who investigate the specific types of uncertainty that exist in the art market as well as the dominant models used to manage the risks. An essential read for both art world practitioners, as well as scholars and students, *Risk and Uncertainty in the Art Market* elucidates the dynamics and unique qualities of the art market as well as developing insights relevant to other sectors, including sociology, business and management, economics and finance.

Virtual Reality: Concepts and Technologies - Philippe Fuchs
2011-07-27

A manual for both designers and users, comprehensively presenting the current state of experts' knowledge on virtual reality (VR) in computer science, mechanics, optics, acoustics, physiology, psychology, ergonomics, ethics, and related area. Designed as a reference book and design guide to help the reader develop a VR project, it presents the read Negotiating Our Way Up Collective Bargaining in a Changing World of Work - OECD 2019-11-18

Collective bargaining and workers' voice are often discussed in the past rather than in the future tense, but can they play a role in the context of a rapidly changing world of work? This report provides a comprehensive assessment of the functioning of collective bargaining systems and workers' voice arrangements across OECD countries, and new insights on their effect on labour market performance today.
