A Quantum City - Ludger Hovestadt 2015-06-16

We know the specific strengths of various cities, are aware of their ranking, are able to discuss their density and growth. But what do all cities have in common, what do we know about the “lowest common denominator”? The “city as a species”, the “primal genetic material of the city”: this is the subject of A Quantum City. This colossal work is a love letter to the city and intellectual culture. We

follow the fictional narrative figure, Orlando, beginning in 320 BC, on his odyssey through the Western world up to the present time. The book is divided into four interrelated chapters and can be read page by page in a discursive manner, however randomly browsing through the book also offers new and multi-faceted interpretations. Great intellectual achievements are compared with obscure and mundane events. A Quantum City offers an inspiring view of

the city that is in us and around us.

Neuroimmune Circuits, Drugs of Abuse, and Infectious Diseases - Herman Friedman 2001-11-30

Introduction and Perspectives

This volume is based on the proceedings of the 7th annual symposium on the topic Neuroimmune Circuits, Infectious Diseases and Drugs of Abuse, Bethesda, Maryland, October 7-9, 1999. This symposium, as in the past, focused on newer knowledge concerning the relationship between the immune and nervous systems with regards to the effects of drugs of abuse and infections, including AIDS, caused by the immunodeficiency virus.

Presentations discussed the brain-immune axis from the viewpoint of drugs of abuse rather than from the subject of the brain or immunity alone. The major aim of this series of conferences has been to clarify the consequences of immunomodulation induced by drugs of abuse in regards to susceptibility and pathogenesis

of infectious diseases, both in man and in various animal model systems. The recreational use of drugs of abuse such as morphine, cocaine, and marijuana by large numbers of individuals in this country and around the world has continued to arouse serious concerns about the consequences of use of such drugs, especially on the normal physiological responses of an individual, including immune responses. Much of the recent data accumulated by investigators show that drugs of abuse, especially opioids and cannabinoids, markedly alter immune responses in human populations as well as in experimental animals, both in vivo and in vitro.

Decoding the New Consumer Mind - Kit Yarrow 2014-03-31

psychologist Kit Yarrow shares surprising insights about the new motivations and behaviors of shoppers, taking marketers where they need to be today: into the deeply psychological and often unconscious relationships that people have with products, retailers, marketing communications, and brands. Drawing on hundreds of consumer interviews and shop-alongs, Yarrow reveals the trends that define our transformed behavior. For example, when we shop we show greater emotionality, hunting for more intense experiences and seeking relief and distraction online. A profound sense of isolation and individualism shapes the way we express ourselves and connect with brands and retailers. Neurological research even suggests that our brains are rewired, altering what we crave, how we think, and where our attention goes. *Decoding the New Consumer Mind* provides marketers with practical ways to tap into this new consumer psychology, and

Yarrow shows how to combine technology and innovation to enhance brand image; win love and loyalty through authenticity and integrity; put the consumer's needs and preferences front and center; and deliver the most emotionally intense, yet uncomplicated, experience possible. Armed with Yarrow's strategies, marketers will be able to connect more effectively with consumers—driving profit and success across the organization.

Death in Florence - Marco Vichi 2015-10-15

Florence, 1966. The rain is never-ending. When a young boy vanishes on his way home from school the police fear the worst, and Inspector Bordelli begins an increasingly desperate investigation. Then the flood hits. During the night of November 4th, the swollen River Arno, already lapping the arches of the Ponte Vecchio, breaks its banks and overwhelms the city. Streets become rushing torrents, the force of the water sweeping away cars and trees, doors, shutters and anything else in its wake. In the aftermath of this unimaginable tragedy the mystery of the child's disappearance seems destined to go unsolved. But obstinate as ever, Bordelli is not prepared to give up.

Cerebral Autoregulation - Stephen Payne 2016-06-24

This Brief provides a comprehensive introduction to the control of blood flow in the brain. Beginning with the basic physiology of autoregulation, the author goes on to discuss measurement techniques, mathematical models, methods of analysis, and relevant clinical conditions, all within this single volume. The author draws together this disparate field, and lays the groundwork for future research directions. The text gives an up-to-date review of the state of the art in cerebral autoregulation, which is particularly relevant as cerebral autoregulation moves from the laboratory to the bedside. Urban Forms - Ivor Samuels
2012-05-04

This popular and influential work, translated here into English for the first time, argues that modern urbanism has upset the morphology of cities, abolished their streets and isolated their buildings. In tracing the stages of this transformation, this book presents the view that the urban tissue, the intermediate scale between the architecture of buildings and the diagrammatic layouts of town planning, is the essential framework for everyday life. Only by investigating the urban tissue will it be possible to understand the complex relationships between plot and built form, between streets and buildings and between these forms and design practices. The chosen trail of the first

French edition - Paris, London, Amsterdam, Frankfurt - is one of continuously evolving modernity. It outlines a history, which, in one century (1860-1960), completely changed the aspect of our towns and cities and transformed our way of life. The shock has been such that we are still looking for answers, still attempting to find urban forms that can accommodate present day ways of life and at the same time maintain the qualities of the traditional town. This English edition brings the story forward to the present day and considers the impact of the New Urbanism in the United States, which, over the last decade, has sought to re-establish former relationships within the urban tissue.

Central Regulation of the Endocrine System - K. Fuxe
2013-03-08

According to the classical concept of Geoffrey Harris the pituitary gland is controlled by the brain by means of blood-borne chemical messengers produced by central neurons. The recent isolation and structural characterization of several such messengers by Roger Guillemin and Andrew Schally and their collaborators brought the final proof for this hypothesis. This also meant that the extensive knowledge collected in the field of neurobiology now became highly relevant for the endocrinologists. For this reason it was felt important to organize a symposium which brought together experts in the fields of neurobiology and endocrinology. The idea was to focus the attention on neuronal mechanisms, particularly those related to chemical

Psychoneuroendocrine Dysfunction - Nandkumar S.

Shah 2013-11-11

There is no area in medicine that has affected biological psychiatry more profoundly than the developments that have occurred in the last decade of endocrinology and more specifically in neuroendocrinology. In the 1960s, the regulation of endocrine function was considered to rest primarily in the feedback system between the pituitary and the secretions of various target organs. In R. H. Williams' Fourth Edition of the Textbook of Endocrinology published in 1968, the chapter on neuroendocrinology did refer to the median eminence gland with a relatively brief mention of various releasing factors that were the subject of ongoing studies. Only six years later, in the Fifth Edition published in 1974, Seymour Reichlin's chapter on neuroendocrinology listed nine specific hypothalamic releasing factors of which three had already been isolated and purified and thus were referred to as hormones. Most recently

in the current Sixth Edition, published in 1981, the chapter on neuroendocrinology contains a detailed description of the physiology of the various hypothalamic releasing factors and hormones, but also significant emphasis is given to the various neurotransmitters that have been shown to regulate the synthesis and release of these important hypothalamic hormones. In addition, there appeared for the first time in this classic textbook a chapter on psychoendocrinology. One may wonder why there is so much interest not only in endocrinology but more recently in psychology and psychiatry about psychoneuroendocrine It has been known for some time function. Several reasons may be suggested.

Resilience of Luxury Companies in Times of Change is a book for executives and Masters' level students taking courses in luxury management. It offers an insight into the current and emergent business models and strategies luxury companies apply to remain resilient in times of change. It explores a variety of business models answering the following key questions: What is each brand's value proposition used to attract a consumer's willingness to pay? What is each brand's target audience? How do brands navigate and expand their markets? And how do luxury companies organize their resources to design and develop products and services to continually sell to their customers? The answers to these questions provide the foundation of a luxury company's business strategy and, as a result, its brand

architecture. The authors also explore the patterns that have emerged in the ownership, management and the manufacturing in luxury goods companies, where dominance is usually found in certain countries. This book focuses on six key industries in the luxury product sector: fashion, automotive, hospitality, furniture, cosmetics and jewellery. It provides an international perspective with examples drawn from Europe, USA, the Middle East, China and Japan. Through these examples and cases, the authors analyze how luxury companies are facing the challenges posed by external shocks and an extensive need for digitalization. Using concepts and theories from macroeconomics (such as globalisation) and corporate and business strategy, the book aims to connect the dots between theory and practice. Resilience of Luxury Companies in Times of Change provides perspectives of the past, present and future - how luxury companies have evolved

over time and managed to stay resilient despite the challenges they have faced through the different eras.

Decima Flottiglia MAS - Walter S. Zapotoczny Jr. 2017-06-25
Previously unpublished accounts of the Italian frogmen force
Many previously unpublished photos, personal accounts and stories
Detailed accounts of ships destroyed and sunk by Decima Flottiglia MAS
A highly interesting account of a little-known force
A group of determined human torpedoes, motorboat operators and assault swimmers fought bravely for Italy in the Second World War and inspired fear and respect from the British Navy. The actions of these men severely reduced British naval power in the Mediterranean. Even with small numbers and using relatively limited resources, the commandos were a very effective force in the war against the British. By the end of the war, these men would sink or disable over 73,000 tons of Allied warships and over 128,000 tons of merchant

shipping. The story of the Italian commandos is one of determination and bravery. Their tactics aroused confusion and nervousness with Allied commanders and their crews. Italy's Decima Flottiglia Mas predates both the US Navy Underwater Demolition Teams that were formed in 1943 and forerunners of the better-known US Navy SEALs and the British Royal Marines Special Boat Service formed as an offshoot of the Special Air Service in 1941. Perhaps the determination and actions of the Decima Flottiglia Mas qualify them as the best commandos of the Second World War. Illustrations: 16 black-and-white photographs

2008-06-10

As supplier to the Royal Italian Navy and specialist in high-precision mechanisms, Panerai perfected the world's first underwater timepieces in the 1930s, which were not only waterproof at 650 feet, but luminescent as well. Until recently these beautifully designed and technically proficient watches were known only to the Italian military and to a select group of connoisseurs, but today they have become a worldwide phenomenon avidly collected by sportsmen and "Paneristi" throughout the world. Original photography commissioned for the volume highlights the unique technical aspects of

Panerai designs, with special sections devoted to the precision instruments invented for the Italian navy, and to international collectors such as Sylvester Stallone and Mike Horn, who wore a Panerai Arktos designed especially for him while making the first-ever solo circumnavigation of the Arctic Circle from 1999-2000. An extensively researched catalogue raisonné of the firm's collections and archives provides a unique resource for collectors and watch specialists.

Rolex Day-Date - Guido Mondani 2015-01-01

PRESENTATION: ROLEX DAY-DATE, THE "PRESIDENT'S WATCH" The Rolex Day-Date is the first wristwatch which indicates the date and the day of the week. In 1956 Rolex presents one of its most successful and most popular watches ever: the Day-Date,. This model is one of the world's most famous Rolex watches; classic, beautiful, functional, useful and elegant. In 2008 a new chapter of this watch, the Day-date II (ø 41 mm) and in 2015 the new Day-Date 40. Known as "President's Watch", this Rolex Day-Date has characterized and influenced the history of horology with developments and innovations during the years. With high definition unreleased images, technical details, dials variants,

history and updated price of every model, this book analyses every reference from 1956 until today. TOPICS In this book the authors examine calibers, dials, cases, bracelets and many more components of every model. You'll find all dials with their variants of color (Stella dial) and material (lapis lazuli, root wood, meteorite, etc). Furthermore: the first Rolex Day-Date, 1800 series, "pie-pan" dials, 18000 series, personalized dials, special series, vintage advertisements, box, papers, Oysterquartz Day-Date, 18200 and 18300 series, Day-Date II, Day-Date 40 and much more. We can read from an official Rolex document: « THE BIRTH OF THE "DATEJUST" AND THE "DAY-DATE" Not satisfied with having realized a selfwinding waterproof watch, we decided to dedicate ourselves to studying the calendar watch. This is how the "Datejust", which clearly indicates the date on the dial in a small aperture with a Cyclops lens which enlarges it so as to make it easier to read, was

born. The next stage was the launch of the "Day-Date", a perfected model which also indicates, with letters, the days of the week.
