Child Development and Education - Teresa M. McDevitt 2012-01

Child Development and Education bridges the gap between theory and practice, showing those who teach and care for infants, children, and adolescents how to apply developmental research and theory to everyday practice. New to the fifth edition is a sensitivity to the cultural and bioecological nature of development. New features of the text situate children and adolescents in the contexts of their upbringing and articulate the implications of these experiences for educators and other professionals. Illustrated is the diverse nature of development and how it is influenced by social, environmental, and cultural contexts. Also new to this edition is support for teacher licensure preparation. Teacher candidates are alerted to developmental concepts and theorists they need to know, and are provided practice test questions and case studies to review, demonstrating for them how to prepare for their licensure exam.

The Perception of People - Perry R. Hinton 2015-09-16

What are other people like? How do we decide if someone is friendly, honest or clever? What assumptions do we develop about them and what explanations do we give for their behaviour? The Perception of People examines key topics in psychology to explore how we make sense of other people (and ourselves). Do our decisions result from careful consideration and a desire to produce an accurate perception? Or do we jump to conclusions in our judgements and rely on expectations and stereotypes? To answer these questions the book examines models of person perception and provides an up-to-date and detailed account of the central psychological research in this area, focusing in particular on the social cognitive approach. It also considers and reflects on the involvement of culture in cognition, and includes coverage of relevant research in culture and language that influence the way we think and speak about others. As well as providing a valuable text in social psychology, The Perception of People also offers a direction for the integration of ideas from cognitive and social psychology with those of cultural psychology, anthropology, sociology, philosophy and social history. Clear explanation of modern research is placed in historical and cultural context to provide a fuller understanding of how psychologists have worked to understand how people interpret the world around them and make sense of the people within it. Ideal reading for students of social psychology, this engaging text will also be useful in subject areas such as communication studies and media studies, where the perception of people is highly relevant.

Transforming the Workforce for Children Birth Through Age 8 - National Research Council 2015-07-23

Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care

and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.
